Cock-a-hoop. The *h* here, like the *h* in *hooping-cough*, doubtless represents a *wh*; so that, although *whoop* is not an unexceptionable word for the cry of a cock, a *cock-a-whoop* is far more intelligible than the same bird balanced on a *hoop*, as he may occasionally be seen on the signboards of inns.

Now I am a frisker, all men on me look;
What should I do but set *cock* on the hoop!
Camden, Remains.

1. False roof of a house, which may serve as a loft for birds: (either from sparrows and other wild birds nesting in it, or from being used for keeping pigeons).

The word *cucullum* in the most usual and latest Roman sense is still meant of the garret, or *cockloft* as we call it; which was indeed the most contemptible part of the house, and of no better use than to be hired out for very ordinary and common people. —Gregory, *Nova in Scriptura*, p. 10.

Dryden, Juvenal's Satires. My garrets, or rather my cocklofts indeed, are very indifferently furnished; but they are rooms to gentlemen in. Swift.

The cockney travelling into the country is surprised at many common practices of rural affairs. —Watts.

On the whole, Pultenham considers the best standard both for speaking and writing to be the 'usual speech of the court and that of London, within sixty miles, and not much above.' This judgement is probably correct, although the writer was a gentleman pensioner, and perhaps also a cockney by birth. —Cook, *History of English Literature*, i. 321.

[The etymology of this word has indeed exercised the conjectures of the learned in various ways. Meric Casaubon would refer it to the Greek *coqueos* (*coqueos*), one born and bred at home. Identifying as such an origin must be, in point of classical antiquity, to those who are still called *cockneys*, it would now be difficult to find a believer in this imposing and sonorous etymology. . . . Hulot, in a similar manner, explains *to play the cockney*, to play the fool. After him comes Barret, into in the reign of Elizabeth, who defines a cockney, 'a child tenderly brought up, a dawning.' This may seem to countenance the opinion of those who derive the word from *cooker* or *cock*; and which Docker, a writer

contemporary with Barret, in his Knight's Conjurist, boldly affirms to be the derivation. 'This not their fault, but our mothers, our cockering mothers, who for their labour make us to be called cockneys.' Pygme, in his *Anecdotes of the English Language*, inclines to this etymology; deducing it, however, from the old French *coqueter*, to fawn, to participate *coqueter*, whence, by dropping the penultimate, *coqueter*. Mr. Douce thinks, that the word may have once been a term of fondness used towards male children. (in London more particularly.) as *pigeon* in like manner has been applied to a woman. Mr. Ellis, in his specimens of the Early English Poets, deduces it in conformity to a remark made by Mr. Tyrwhitt that the word is probably borrowed originally from the *Kitchen*, i.e. from *coqueter*, and he cites a passage from Pierce Plowman's Visions, 'I have no salt lamon, ne no cockney, collors for to make,' to show that *cockney* means a cook, and that therefore the intelligence which the inhabitants of the metropolis displayed in the culinary art might have procured them the appellation of *cockneys* from the uplandish or country-men. But *cockney*, in the passage which he cites, unfortunately means nothing more than a *little cock*, as Mr. Douce also has observed; the dish to be prepared, but not the cook to dress it. The authority of Bishop Percy and Mr. Tyrwhitt in this also assuming, the meaning of *cock* *cockney*, has been rightly questioned by Mr. Douce.

'At that feast where they served in rich array, Every five and five had a cockney.'

where it signifies a *little cock*, or perhaps a *peacock*, a favourite dish among our ancestors. Caterer, under the word *Coquiner*, calls a 'cockney a simple de-cock, a nice thing.' The citation of Camden in his Britannia,

'Were I in my castle of Bungey Upon the river of Waverney I would not care for the king of Cockney.'

shews, whenever the triplet comes, that London was known by this name; and hence a *cockney* might be assumed for a *Londoner*. After all, there is most reason to believe, that this contemptuous or satirical expression originates in that imaginary region of luxury and idleness formerly called *Cockney*, or *Plenty*; as in the poem cited by Hickeys, probably the festival of the *Cocagne* at Naples may have suggested the poem as well as the word. . . . Hughes, in allusion to the old poem, laments the land of *Cockney*, where fowls ready roasted cry, come and eat me! for, among the delicacies of this happy country, ready roasted geese fly into the house, exclaiming, all hot, all hot! —Todd, in voice.]

All the editor feels sure of is that it is in the word *Cocaigne* as applied to a fictitious district that the origin of the word lies; a *cockney* being a native of the land so called.

Cockneylike. *adj.* Resembling the manners or character of a cockney.

Cockshut. *s.* [the *cock* is the *cock* in wood-cock; the *shut*, assuming that the division of the word is *cock-shut* rather than *cockshut*, is, probably, connected with *shuttle*.] Twilight. (The received explanation of this meaning is that the *cockshut* was a net for catching woodcocks at the close of the day; the glades or avenues in the woods which the birds were then supposed to seek being called *cockroads*. See the notes of the commentators on the passage which supplies the extract.) Used *adjectively*, or as the *first element* in a compound.

Surrey and himself, Much about cockshut time, from troop to troop, Went through the army.

Shakspeare, *Richard III.*, v. 3.

Cocksorrel. *s.* [though at present it is only the French sorrel that is cooked, *cocksorrel* is a probable derivation. Cocoa, or Cacao. *s.* [?] Fruit of the Theobroma cacao, the chocolate (*not the even*) nut; beverage prepared from it.

Linnæus was so fond of it, that he gave the specific name Theobroma, food of the gods, to the tree, which produced it. The *cocoa* bean is in a fruit somewhat like a cucumber, about five inches long and three and a half thick, which contains from twenty to thirty beans arranged in five regular rows, with partitions between, and which are surrounded with a rose-colored spongy substance like that of watermelons. —Cris, *Dictionary of Arts, Manufactures, and Mines*, *Cocoa*.

Cocoa or *cacao* is rather prepared by grinding the roasted seeds with their outer shells or husks between two cylinders into a paste, which is then mixed with starch, sugar, &c. This forms common cocoa, rock cocoa, soluble cocoa, &c. —or the roasted seeds divested of their husks are broken into small fragments, in which state they form *cocoa nibs*, the purest state of *cocoa*. The husks of the . . . are used by the poorer classes of Italy and Ireland in the preparation of a wholesome and agreeable beverage; they are imported from Italy under the name of 'miserable.' This most precious inheritance of a Singhaloe is

his ancestral garden of *coco-nuts*, . . . In a case which was decided in the district court of Calicut, within a very short period, the subject in dispute was a claim to the 2,320th part of ten coco-nut trees. —*Ibid.*, pt. vii, ch. ii.

Cocoon, *s.* [Italian, *coccone*, from Lat. *coccus* = berry.] Variety of chrysalis or pupa, generally applied to that of the silkworm; (the so called eggs of ants are not true eggs, but pupae; and, as such, more properly called *cocoons*).

For every worm beneath the moon,
Draws different threads, and late and soon
Spins, toiling out his own cocoon.

Having acquired its full size, it begins to discharge a viscid secretion in the form of pulpy twin filaments . . . which harden in the air. These threads are instinctively coiled into an ovoid nest round itself, called a *cocoon*, which serves as a defence against living enemies and changes of temperature. —*Free Dictionary of Arts, Manufactures, and Mines*, Silk.

Cocoon, *s.* [Lat. *cocctio*, -onis, from *coquo* = cook.] Act of boiling.

The disease is sometimes attended with expectation from the lungs, and that is taken off by a *cocctio* and resolution of the feverish matter, or sometimes in suppurations or empyema. —*Archevalot, On the Nature and Cause of Aliments*.

Cod, *s.* [Lat. *gadus*.] *Gadus Morrhua* (a well-known and valuable scabbard); codfish; haddock.

She that in wisdom never was so frail,
To change the *cod's* head for the salmon's tail.

These two modes of line fishing are practised to a great extent nearly all round the coast; and enormous quantities of *cod*, haddock, whiting, codling, pollack, hake, ling, lark, and all the various flat-fish, usually called by the general name of whitefish, are taken. Of *codfish* alone the number taken in one day is very considerable. . . . The largest *codfish* I have a record of weighed sixty pounds, was caught in the Bristol Channel, and produced five shillings. . . . The young of the *cod* . . . when of whitish size, are called *codlings* and *skimmers*, and, when larger, *Tomlin* or *Tomlin cod*. —*Yarrell, British Fishes*.

Used adjectively.

them again, said, Woe these for my sake. —*Shakespeare, As you like it*, ii. 4.

By corn then there may'st safely sow,
Where in full *cods* last year rich pease did grow.

Code, *s.* [Lat. *codex*.] Body of classified laws.

We find in the Ptolemaic and Justinian *code* the interest of trade very well provided for. —*Archevalot, Tables au code, Codes, Rights, and Measures*.

Intendments, or *code*, articles they draw,
Large as the fields themselves, and larger far
Than civil *codes* with all their glosses are.

Pope, Satires.
A *code* of laws is like a vast forest; the more it is divided the better it is known. To render a *code* of laws complete, it is necessary to know all the part which should be comprised in it. It is necessary to know what they are in themselves, and what they are in relation to one another. This is accomplished when taking the body of laws in their entirety; they may be divided into two parts, in such manner that everything which belongs to the integral body may

be found comprised in one or the other part, and yet nothing shall, at the same time, be found in both. . . . In a *code* of laws everything turns upon fitness, rights, obligations, services. . . . If the distinction between the civil and the penal *code* be required for the greater number of juriconsults reply that the civil *code* contains the descriptions of rights and obligations, and the penal *code* those of crimes and punishment. —*Beaumont, General View of a complete Code of Laws*.

Sylvestre, Du Barlet, 30. (Ord MS.)

Codliver (oil), *s.* See *Codliver*.

The oils obtained from the livers of the different species composing the tribe Gadidae, appear to be . . . similar. . . . To all of 'em the term *Oleum Jecoris Aselli*, *Oleum Jecoris Gadii*, is indifferently applied; though it is commonly used, especially in this country, to indicate the oil preserved from the liver of the common cod. It would be better then to apply the term *Oleum Jecoris Morrhua*, or simply *Oleum Morrhua*, when it is intended exclusively to designate the latter oil. Among London dealers I have met with one kind of *cod-liver* oil. Its colour is chestnut brown, and its odour is like that of boiled *cod's* liver. —*Percival, Materia Medica*.

fisheth for him might be sure to catch a *codshad*. —*Napier's*, (Ord MS.)

Coefficacy, *s.* Power of several things acting together to produce an effect.

We cannot in general infer the efficacy of these
causes, or *coefficacy* particular in meditations. —*Nor T. Brown, Valpate Erroneas*.

Coeficiency, *s.* Cooperation; state of acting together to some single end.

The managing and carrying out of this work, by the spirit's instrumental *coefficient*, requires, that they be kept together, without distinction or dissipation. —*Glennville, Scripta Sententia*.

Coefficient, *s.* [Lat. *con* = with, *efficiens* = accomplishing.] That which unites its action with the action of another.

a. In *Algebra*. Number or known quantity, prefixed as a multiplier to a variable or an unknown quantity.

Coessential, adj. Participating of the same essence.

The Lord our God is but one God, in which indivisible unity we adore the Father, as being altogether of himself, we glorify that consubstantial word which is the Son; we bless and magnify that co-essential Spirit eternally proceeding from both, which is the Holy Ghost.—*Hooker, Ecclesiastical Polity.*

Coessentiality, s. Participation of the same essence.

The appellation of the Son of God, assumed by him [Christ], implies the same kind of relation to him, as that of a man to his father; that is, it implies coessentiality with God, and therefore equality of nature, and consequently divinity in its full extent.—*Bishop Burgess, Sermon on the Divinity of Christ.* p. 41: 1750.

Coestablishment, s. Joint establishment.

The morals of the community will be better secured by an exclusive establishment, at the publick expense, of the teachers of one sect, than by a coestablishment of the teachers of different sects of christians. *Bishop of Landaff (Watson), Charge.* p. 11: 1790.

Vain therefore was that opinion of a real matter coeval with God as necessary for production of the world by way of subject, as the Eternal and Almighty God by way of efficient. . . . This coeternity of matter opposeth God's independency.—*Bishop Pearson, Exposition of the Creed.* art. I.

Coexist, v. n. Exist at the same time.

The three stars that coexist in heavenly constellations are a multitude of stars. *Sir M. Hale, Originations of Mankind.*

Of substances no one has any clear idea, farther than of certain simple ideas coexisting together.—*Locke.*

With with.

It is sufficient that we have the idea of the length of any regular periodical appearances, which we can in our minds apply to duration, with which the motion or appearance never co-existed.—*Locke.*

The axiom.—Things which coexist with the same thing coexist with each other, cannot, however often repeated, help us to any knowledge beyond that of the coexistence of an indefinite number of things; any more than the axiom.—Things which are equal to the same thing are equal to each other, can, by multiplied application, do more than establish the equality of some series of magnitudes.—*Herbert Spencer, Principles of Psychology.* p. 126.

Coexistence, s. Existence at the same time with another; concurrent, or simultaneous, existence.

The grouping together of the like coexistences and sequences presented by experience, and the formation of a belief that future coexistences and sequences will resemble past ones, is the common type of all initial inferences, whether they be those of the infant or of the philosopher.—*Herbert Spencer, Principles of Psychology.* pt. iii. ch. I.

When we affirm that all negroes are black, or that all negroes have woolly hair, we assert an uniformity of coexistence. We assert that the property of blackness, or of having woolly hair, invariably coexists with the properties which, in common language, or in the scientific classification that we adopt, are taken to constitute the class *negro* or the class *negro*.—*Mill, Logic.* b. iii. ch. xii. § 4.

No long as only coexistence or non-coexistence, simultaneity or non-simultaneity, is the thing presented, quantity of time can scarcely be said to be involved.—*Ibid.*

In Scotland, during the eighteenth century, superstition and science, the most irreconcilable of all enemies, flourished side by side, unable to weaken each other, and, unable, indeed, to come into collision with each other. There was coexistence without contact. The two forces kept apart.—*Buckle, History of Civilization in England.* vol. ii. ch. vi.

With to.

The measuring of any duration, by some motion, depends not on the real coexistence of that thing to that motion, or any other periods of revolution.—*Locke.*

With with.

We can demonstrate the being of God's eternal ideas, and their coexistence with him.—*Grew, Cosmologia Sacra.*

Coexistent, adj. Having existence at the same time with another.

All modes of extension are resolvable into relations of coexistent positions. Space is known to us as an infinitude of coexistent positions that do not resist. Body as a congeries of coexistent positions that do resist. The simplest extension therefore, as that of a line, must be regarded as a certain series of coexistent positions; equal lines, as equal series of coexistent positions; and coextension, as the equality of separate series of coexistent positions: that is, the sameness in the number of coexistent positions they include.—*Herbert Spencer, Principles of Psychology.* p. 297.

With to. *Rare.*

To the measuring the duration of any thing by time, it is not requisite that that thing should be coexistent to the motion we measure by, or any other periodical revolution.—*Locke.*

With with. *Common.*

Time is taken for so much of duration as is coexistent with the motions of the great bodies of the universe.—*Locke.*

All that one point is either future or past, and no parts are coexistent or contemporary with it.—*Baileys.*

Coexistent, s. That which coexists with another.

The principle of elimination . . . he [Bacon] deemed applicable in the same sense, and in an unqualified manner, to the investigation of the coexistences, as to that of the successions of phenomena. He seems to have thought that as every event has a cause, or invariable antecedent, so every property of an object has an invariable coexistent, which he called its Form; and the examples he chiefly selected for the application and illustration of his method, were inquiries into such Forms; attempts to determine in what else all those objects resembled, which agreed in some one general property, as hardness or softness, dryness or moistness, heat or coldness.—*J. N. Mill, System of Logic.* b. iii. ch. xiii. § 1.

Coextend, v. n. Extend over the same part of space or time in conjunction with something else.

Has your English language one single word that is coextended through all these significations.—*Bentley, Philothesaurus Lapsus.* ii. § 35.

Coextension, s. Act or state of extension over the same space or duration with another.

The second adjection is, that coextension, as ordinarily determined by the juxtaposition of the co-existent objects, involves no comparison between two series of states of consciousness; but merely an observation that the ends of the objects coincide; and this is true. But it is clear that this mode of ascertaining coextension is nothing but an artifice, based upon the experience that extensions separately known to us through the equal series of states they produce, always manifest this coincidence of their ends when placed side by side.—*Herbert Spencer, Principles of Psychology.* p. 200.

Coextensive, adj. Having the same extent.

The objects of the society are coextensive with the true spirit of christian charity.—*Bishop of Winchester (North), Sermon.*

(See also extract under Coextension.)

Coextensiveness, s. Attribute suggested by Coextensive: (so far as it differs from Coextension, it does so in suggesting that the object to which it applies is not only extended, i.e. endowed with extent, as is the case with the smallest particle, but that it is extensive, i.e. extended largely. Every view or prospect has the property of extent; it is only when it is a wide one that we call it extensive).

While, in any such task as that of the exhibition of a remedy so much approaching to co-extensiveness with the disorder, no ground appears for supposing any other limit at present engaged.—*B. Alban, Justice and Civilization Petitions.* advertisement.

Coffee, s. [Arahic, *kawah*.—see also third extract.] Berry of the Coffea arabica, or coffee tree; infusion of the berries.

They have in Turkey a drink called coffee, made of a berry of the same name, as black as sand, and of a strong scent, but not aromatic; which they take, beaten into powder, in water, as hot as they can drink it. This drink comforteth the brain and heart, and helpeth digestion.—*Bacon.*

To part her time 'twixt reading and bedoes, *Pope.*

Or ever cold coffee trifle with the spoon. *Pope.*

[Though he rejects all generic names which have not a Greek or Latin root, he is willing to make an exception in favour of those which from their form might be supposed to have such a root, though they

are really borrowed from other languages, as *Then*, which is the Greek for goddess; *Coffea*, which might seem to come from a Greek word denoting silence (*κόφος*); *Cleistanthus*, which appears to mean thistle-flower, but is really derived from the Arabic *kehl*; and many others.—*Whewel, Novum Organon renovatum*, aphorism xxi.

Used either adjectively or as the first element in a compound; there being few words in which the difference of the two is less shown in the spelling, the same author, as may be seen in the extracts, writing *coffee-bush* and *coffee tree*. In sound it is generally a true compound, i.e. a word with but one accent.

Although the coffee plant, the 'kōwāth' of the Arabs, which is a native of Africa, was known in Yemen at an early period, it is doubtful whether there, or in any other country in the world, its use as a stimulant had been discovered before the beginning of the fifteenth century. The Arabs introduced it early into India; and before the arrival of the Portuguese or Dutch, the tree had been grown in Ceylon; but the preparation of a beverage from its berries was totally unknown to the Singhalese, who only employed its tender leaves for their curries, and its delicate jasmine-like flowers for ornamenting their temples and shrines.—*Ibid.*

The coffee tree flourishes in hilly districts where its root can be kept dry while its leaves are refreshed with frequent showers.—*Ibid.*

2. More compound than adjectival.

E. Tennel, Ceylon*, pt. vii. ch. vi. note.

Cogitative. *adj.*

1. Having the power of thought and reflection.

Cognac. *s.* Brandy so called from the name of the place where it is made: (*a proper* rather than a *common* name; and, in respect to its use as a part of speech, an *adjective* rather than a *substantive*).

The most celebrated of the French brandies, those of Cognac and Armagnac . . . contain more than one half of their weight of water, and come out therefore highly charged with the frequent essential oil of the husk of the grape. . . . If the best *cognac* brandy be carefully distilled at a low heat, and the stronger spirit be diluted with water, it will be found to have suffered very much in its flavour. *Cognac*, *Dictionary of Arts, Manufactures, and Mines*, Brandy.

The Norwegian gentry seem to prefer it [*potato whisky*] as a drink, when twice distilled, to *cognac* brandy.—*Laing, Residence in Norway*, ch. iii.

Cog-nate, -nise, -nominal. We have now reached a section of derivatives from three Latin roots; viz. the terms for *born*, *know*, and *name*. These derivatives agree in having the prefix *co-*, followed not only by *g*, but by *g* and *n*; and the case, though suggested, is not covered, by the remarks under *Co-, Con-*.

The power of the *g* is peculiar. The ordinary Latin for *born*, *know*, and *name* is *intus*, *no-sco*, *nomen*, respectively; words beginning with *n* without any *g*, and requiring that the prefix should be *con-*, as in *Connotation*.

Nevertheless, the *g* is no true part of the prefix, except so far as it belongs to the same syllable; what it is a part of the second element in its older and fuller form, which was *g-notus*, *g-no-sco*, *g-nomen*, respectively. How it became lost in the fundamental word, while it survived in the compound, is easily seen. The combinations *gnot-* and *gno-* are combinations which are readily shortened into *no-* and *no-*, on account of *gn-*, in the same syllable, requiring more care in the pronunciation than is usually bestowed. Distribute them, however, between two syllables, and the sound becomes easy, as *cog-na-*, *cog-no-*.

This is illustrated if we take, in our own language, the words *Gnat* and *Gnaw*, and suppose them, so long as they are *simple words*, to be spelt phonetically (*nat* and *naw*), whilst as *elements in a compound* they are spelt etymologically, i.e. with the *g*. The same applies to *Knight*, *Knife*, and other words.

But the matter does not end here. *Cognizant* is often, perhaps generally, pronounced *cognizant*. In French *gn* is always pronounced more like *ng*, than simply like *g* followed by *n*; and so it is in many other languages; so much so that it is a rule of considerable generality that *g* and *n* in contact form an unstable combination. When the *g* comes last it has a tendency to become the *ng* in *song* or *king*; when it comes first its affinities with *g* show themselves, and that as follows: *eg* either becomes *g* and follows the *n* (*ng*), or the *n* becomes what is called liquidized, and has a sound like that of *ng*, but without being identical with it; e.g. the Spanish *ñ*, and the French *ny*. Neither of these sounds is English. In pronouncing *Cognizant*, however, as *cognizant*, we have the same principle at work.

To conclude: in the words under notice, the prefix *co-* neither comports itself in its usual manner before *g*, nor yet violates the rules laid down under *Co-, Con-*. These rules were *phonetic*. In the cases before us, however, the combination is *etymological*; and *g*, an element of the root in its older, but strange to it in its newer, form, is treated in the matter of syllabification as if it belonged to the prefix.

Cognate. *adj.* [Lat. *cognatus*—akin to, related by blood.—see preceding remarks.] Kindred; partaking of the same nature.

We have been traversing a Gallery, or other side of which they stand ranged. . . . *Cognizant* of its history, aware of the principles by which the English chiefs are marshalled, *cognizant* of the springs that move the politic will, whose revolutions we contemplate, it is an easy thing for us to

comprehend the phenomenon most remarkably presented by these heaves and their arrangement. . . . But suppose some one from another hemisphere, or another world, admitted to the spectacle which we thus so familiar, and consider what would be its first effect upon his mind.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III., Sir Samuel Romilly.*

Cognize. *v. a.* [see remarks under Cognate, -nize.] Take notice of anything.

As the reasoning faculty can deal with no facts until they are cognized by it—as until they are cognized by it they are to it non-existent—it follows that in being cognized, that is, in becoming beliefs, they begin to exist relatively to our reason. Whether really pre-existent or not, they can have no logical pre-existence; since the being perceived to exist is the being believed.—*Herbert Spencer, Principles of Psychology, p. 15.*

Cognominal. *s.* One having the same name as some one else; namesake.

Nor do those animals more resemble the creatures on earth, than they on earth the constellations which pass under animal names in heaven; nor the dogfish at sea much more nimbly out the dog of the land, than his cognominal or namesake in the heavens.—*Sir T. Browne, Vulgar Errors.*

Cognominal. *adj.* [Lat. *cognomen*, -inis = added name.—see remarks under Cognate, -nize.] Belonging to the surname.

The first of these two [names] is Pontius, the name descended to him from the original of his family; the second, Pilatus, as a cognominal addition distinguishing him from the rest descending from the same original.—*Bishop Pearson, Exposition of the Creed, art. iv.*

In metaphysical writings this word is somewhat less common than it used to be; Knowable being preferred by such as aim at purity of English. The same writers, for the most part, use Thinkable instead of Cogitable. How far they have considered the expedience of separating the words from such derivatives as Cogitability and Cognoscibility is not apparent. It is to be hoped, however, that they may not, for the sake of being consistent, write thinkability and knowability.

Cognoscitive. *adj.* Having the power of knowing.

Cointension. s. [see extract.] Condition of equal intension, intenseness, or intensity in two objects.

Thus far we have dealt with reasoning which has for its fundamental ideas, extension, coextension, and coextension; and which proceeds by establishing *cointension* in degree between relations committal in kind. . . . The words Tense, Tension, Intense, Intension, are already in use, but tension being synonymous with Intensity, *cointension* will be synonymous with *cointensity*, and is here used instead of it to express the parallelism with *cointension*. The propriety of calling relations more or less intense, according to the contrast between their terms, will perhaps not be at first sight apparent. All quantitative relations, however, save those of equality, involving the idea of contrast. The relation of 5:1 being called greater than the relation of 2:1, because the contrast between 5 and 1 is greater than the contrast between 2 and 1; and contrast being habitually spoken of as strong or weak; as forcible, as intense; the word Intension seems the only available one to express the degree of any relation as distinguished from its kind. And *cointension* is consequently here chosen, to indicate the equality of relations in respect of the contrast between their terms. —*Herbert Spencer, Principles of Psychology*, p. 117.

Cointénsté. s. See Cointension.

Of such kinds, several are placed side by side, each being an ellipse deviating little from a circle, so that the mouth may project but a small space. The dimensions are such, that from ten to twelve cubic feet of coal-sol may be spread in a layer six inches deep upon the sole of the furnace. —*Ure, Dictionary of Arts, Manufactures, and Mines, Pitcoal.*

Used adjectivally.

A new-born of the above *coking* ovens, having lately indicated them as a nuisance, procured, secondly, a petition, a parcel of affidavits from sundry clerical and medical men. Two of the former, who had not entered the premises, but had espied the outside of the furnace's range at some distance, declared that 'the *coking* process, as performed at the ovens, is a species of distillation of coal.' Cold. s.

1. Opposite of heat; coldness; sensation of cold; chilliness.

Heat and cold are nature's two hands, whereby
she chiefly worketh: and heat we have in readiness,
in respect of the fire; but for cold we must stay till
it cometh, or seek it in deep caves, or high moun-
tains; and when all is down, we cannot obtain it in
any great degree.—*Bacon, Natural and Experimental History.*

2. Unconcern, frigidity of temper; want of zeal; negligence; disregard.

Divisions of religion are not only the farthest
apart, because in religion all men presume them-

which, in other contentions, may be thought to pro-
ceed from moderation, is not in these so favourably
construed.—*Hooker, Ecclesiastical Polity*, dedica-

Secure in guarded coldness, he had mix'd
Again in fancied safety with his kind,
And deem'd his spirit now so freely fix'd,
And sleath'd with an invulnerable mind.

Tempests and storms in his afflicted breast.

Coleoptera. s.

- [Gr. *κόλας* = sheath, *πτερον* = wing.] In Zoology. Class of insects, the wings of which are covered with a sheath (elytron), represented by the beetles. (The word has several derivatives.)

Those bespoken insects which are devoid of wings
are called Apteræ; those with two wings only are
the Diptera. All the rest have four wings. The
Lepidoptera have four scaly wings; the Hymenoptera
have four veined wings, crossing each other
when at rest; the Hemiptera have one pair of
wings partially thickened, and called hemelytra;
the Orthoptera have one pair of wings wholly thick-
ened, the other folded lengthwise; the Coleoptera
have one pair wholly and much thickened, called
elytra, and the other pair folded crosswise; the
Neuroptera have four reticulated wings; the Stre-
psiptera have one pair of wings rudimentary and
curled up. In the Acanthoptera both pairs are rudimen-
tary.—*Owen, Lectures on Comparative Anatomy*, lect. xvi.

From his own ground (a small well-water'd spot);

She cut'd, and then with handy care she dress'd it.

Cólic. s.

- [Fr. *colique*.] Disease so called, consisting in a painful spasmodic contraction of the bowels (in its most violent form the peristaltic action is inverted); gripes; or the gripes; in Medicine, ilens (from the *ileum*, a portion of the small intestines, though the *colon*, from which the word is ultimately derived, belongs to the *large*: there is probably some confusion with *χολη* = bile).

It chiefly is a disorder of the colon; but loosely,
any disorder of the stomach or bowels that is at-
tended with pain. There are four sorts: 1. A bilious
colic, which proceeds from an abundance of acrimony
or choler irritating the bowels, so as to occa-

sion continual gripes, and generally with a looseness; and this is the best managed with lenitives and emollients. 2. A flatulent *colic*, which is pain in the bowels from flatules and wind, which dilateth them into unequal and unnatural capacities; and this is managed with carminatives and moderate openers. 3. An hysterical *colic*, which arises from disorders of the womb, and is communicated by consent of parts to the bowels; and is to be treated with the ordinary hystericks. 4. A verminous *colic*, which is from convulsive spasms and contractions of the guts themselves, from some disorders of the spirits or nervous fluid, in their component fibres; whereby their capacities are in many places straightened, and sometimes so as to occasion obstinate obstructions: this is best remedied by brisk catharticks, joined with opiates and emollient dilaters. There is also a species of this distemper which is commonly called the stone *colic*, by consent of parts, from the irritation of the stone or gravel in the bladder or kidneys; and this is most commonly to be treated by opuristics and oily diuretics, and is generally assisted with the carminative turpentine clysters.—*Quincy.*

- In the plural; i.e. equivalent to gripes in number as well as sense.

Cólics of infants proceed from acidity and the air in the aliment expanding itself, while the aliment ferments.—*Arbuthnot, On the Nature and Choice of Aliments.*

- Griped.

Cólicky. adj.

- Of the nature of colic (as in 'colicky pains'); cholick (this latter has been the commoner adjectival form in Medicine since the final *k* was dropped from the substantive, as *colicky* would run the chance of having the second *c* sounded as *s*).

Coll. v. a.

It may arise from several causes; from apoplexy; from poisoning by opium, carbonic acid gas; from drunkenness; from the operation of intense cold; from poisoning of the blood in some disorders of the urinary organs; and from accumulation of serum in or on the brain. It is often important to distinguish the *colma* of drunkenness from that of apoplexy; and in doing so we are often assisted by the colour of the breath.—*Hopier, Physician's Vade Mecum*, by Dr. Guy, § 914 (c).

Combustibility. *s.* Attribute suggested by Combustible; liability to catch fire; capability of being burnt.

As the opposite to Combustible, viz. *In-combustible*, is in common use, the form before us is preferable to the abstract in *-ness*; which would give the awkward form *un-combustibleness*; not to mention the English origin of the termination *-ness*, as contrasted with the Latin origin of the adjective to which it is attached).

2. In *Chemistry*. Evolution of heat arising from the combination of a substance capable of combustion (combustible) with a substance capable of supporting the same (supporter of combustion). This heat need by no means be accompanied by light, or be in any way sensible to the ordinary tests; the rust of iron being as true an instance of combustion (in the general sense given to it in Chemistry) as the flame of a candle. See extracts.

The combinations of oxygen, like those of all other bodies, are attended with the evolution of heat. This result, which is often overlooked in other combinations, . . . assumes an unusual importance in the combinations of oxygen. The economical applications of the light and heat evolved in these combinations are of the highest consequence and value, and oxidation alone of all chemical actions is practised, not for the value of the products it affords . . . but for the sake of the incidental phenomena attending it. . . . When a body combines with oxygen, it is said to be burned, and, instead of undergoing oxidation, is said to suffer combustion; and a body which can combine with oxygen and emit heat is termed a *combustible*. Oxygen in which the body burns is then said to support combustion, and is called a *supporter of combustion*.—*Graham, Elements of Chemistry*, p. 250.

Combustion results in common cases from the mutual chemical action and reaction of the combustible and the oxygen of the atmosphere, whereby

Come. *v. n.* preterite, *came*; participle, *come*, the older form *comen*. [A.S. *comen*.]

As a verb, i.e. as a word implying a state or an action, Come simply denotes motion—motion, however, of a peculiar kind.

This is best understood by comparing or contrasting it with its opposite and correlative *Go*.

The motion denoted by *Go* is *from*, the motion denoted by *Come* is *to*, the speaker. Hence, the additional or *ad-verbal* idea involved in the term is pronominal rather than adjectival; e.g. if we explain *Hurry* as *move hastily*, the motion expressed by *hurry* is adjectival, and is founded on the Substantive *haste*; whereas, if we explain *Come* to mean *move this way*, the secondary element, though connected with the Adverb *hither* or *hence*, is ultimately founded on the Pronoun *he* or its root; which, though usually treated as Personal, is, originally, Demonstrative.

This is because the idea suggested is not that of a simple quality, but that of a relation; a relation which in many respects may be compared with the ones denoted by *this* and *that*, *here* and *there*.

It is not easy, in all cases, to determine whether the word be properly used. Where A, standing on a certain spot, says that B is expected to present himself on that spot, the word *Come*, i.e. *move in a direction to the speaker*, is the natural and appropriate term; the speaker's position being beyond doubt. But what if he has to say that B will meet him at some third place, or one different from that on which he is speaking? In such a case the movement towards A is only partial, and is complicated by the idea of movement from his (A's) own position. If this predominate, so that the spot left by B take a more prominent place in the conception than the spot the speaker leaves, the use of *Go* suggests itself.

This is shown in the following extracts (all of which are Johnson's), in the second division of which *go* may be substituted for *come*.

a) *Come*, alone the appropriate term.

Caesar will come forth to-day.
(Shakespeare, Julius Caesar, ii. 1.)

Here both the speaker and the person spoken to are waiting to see Caesar, and that on a spot which he will approach.

3 Q

COME

{ COME
{ COME

The next—

Coming to look on you, thinking you dead,
I spake unto the crown as having sense.
(Shakespeare, Henry IV. Part II. iv. 4.)

is also uttered on the spot where the speech to the crown was made, and where the wearer of it was addressed.

By the pricking of my thumbs
Something wicked this way comes.
(Shakespeare, Macbeth, iv. 1.)

b) *Come*, capable of being superseded by *go*.

I did hear
The galloping of horse: who won't come by?
(Shakespeare, Macbeth, iv. 1.)
Bid them cover the table, serve in the meat,
and we will come in to dinner. (Id., Merchant of Venice, iii. 5.)

As soon as the commandment came abroad,
the children of Israel brought in abundance the first fruits. (2 Chronicles, xxxi. 5.)
It is impossible to come near your lordship at any time, without receiving some favour. (Congreve, Dedication to the Old Bachelor.)

In the following the greater propriety of *go* is evident: the natural combination being *Come* and *my*, *Go* and *your*.

Look to't, I charge you; come your ways.
(Shakespeare, Hamlet, i. 3.)

Another point connected with *Come*, in which it agrees with *Go*, is its thoroughly neuter or intransitive character. Without wholly changing its meaning, it cannot become active or transitive.

Few verbs, however, at first sight oftener appear to govern a noun. This is because such expressions as 'come this way,' 'he went three miles,' and the like are common. The government, however, is only apparent. No action expressed by the verb *Come* affects the noun as an object.

Its true construction is *adverbial*; i.e. the noun (generally in conjunction with some other word) shows the manner in which the action is performed, but by no means expresses anything that the action affects. The same construction is common in other languages where an accusative case, after an intransitive verb, takes the guise of a case in a state of government. The accusative which in Latin expresses duration of time is an instance. From this point of view, nouns conveying the notion of direction or distance are those that most frequently follow *Come*; and, next to these, the pronoun *it* in its indefinite, or indeterminate, sense. Such expressions as 'to come it,' 'to go it,' 'to come it strong,' although always colloquial, and often vulgar, are strictly idiomatic. See *It* indefinite and postpositive.

Come (in the imperative mood). An exhortation, generally implying agreement or reconciliation.

Come, let us make our father drink wine.—*Genesis*, xix. 32.

Come, come, at all he laughs I laugh, no doubt:
The only difference is, I dare laugh out. *Pope*.

Come, v. n. Sprout.

The close affinity of the notion of sprouting like a seed and approaching the surface of the earth makes it difficult to say where the senses connected with the German *keim*, and the senses connected with the A.S. *cuman*, run into one another. In the first of the following extracts the sense was probably *sprout*, and the pronunciation *coam*; in the remainder *come* is the ordinary verb. Is it a small benefit that I am placed there, where no *comess*, no blacksmiths beat my ears? where my eyes are in no peril of wounding objects? where I hear no invectives, no false doctrines, no sermocinations of ironmongers, fellmongers, cobblers, hroam-men, grocers, or any other of those inspired ignorants? no curses, no raileries; where I see no drunken *comessations*, no rebellious routs, no violent oppressions, no obscene rogueries, nor might else that may either vex or afflict my soul? He . . . has laid down three maxims, which he deems sufficient to solve all the intricacies of the subject. . . . The third is, that the rulers of every empire from *comity* admit, that the laws of every people, in force within its own limits, ought to have the same force everywhere, so far as they do not prejudice the powers and rights of other governments, or of their citizens. . . . It has been thought by some jurists that the term *comity* is not sufficiently expressive of the obligation of nations to give effect to foreign laws when they are not prejudicial to their own rights and interests. And it has been suggested that the doctrine rests on a deeper foundation; and it is not so much a matter of *comity* or courtesy as a matter of permanent moral duty. Now, assuming that such a moral duty does exist, it is clearly one of imperfect obligation, like that of benevolence, humanity, and charity. — *Story, Conflict of Laws, § 2-33.*

The income of the order consisted . . . of landed property in almost every province in Europe . . . During the first years . . . they were farmed out to members of the laity entirely unconnected with the institution . . . This system, however, was found to be extremely faulty in the working . . . In order to guard against this evil, it was determined to place over each of them a member of the order who should act as a steward of the funds committed to his control . . . These establishments formed at the same time branches . . . On the first creation of these [branch] establishments, they were denominated *Prebendories*; the superior being called the *prebendary*; but eventually the name became changed to that of *commandery*, by which they were always afterwards known. The council reserved to themselves the power of at any time reviving a commander from his post, and substituting another in his place, at their pleasure; he being merely considered as the steward of their property. Time, however, gradually wrought a great change in the relative position which the commanders held to the council; and, eventually, a nomination to a *commandery* came to be considered in the light of a legal acquisition, subject only to the payment of a certain amount of annual tribute to the public treasury, which tribute received the name of *Responsions*. *Major Porter, History of the Knights of Malta, vol. i. ch. ii.*

In the common construction with the reflexive pronoun, as in such phrases as: 'He has *committed* himself' (to which he is *committed* is an equivalent expression) to a certain principle or line of conduct, the fundamental sense of the verb is that which it has in the first series of examples; the person spoken of having intrusted himself to something. By omitting to name the specific object to which this *committal* is made, we get a general expression for doing something that involves risk; and as, in all risks, the dangerous element preponderates, the sense of such expressions as 'he has *committed* himself' is disparaging, being that he has done something by which he has either lost, or is likely to lose, reputation.

in some companies be slightly mentioned without *committing* the speaker.—*Miss Aiken*, *To Dr. Channing*: 1830.

5. With sense. Spontaneous or natural judgement of the world at large (which, as such, is general or approximately universal), as opposed to judgements founded on refined inferences. In such expressions as 'the common-sense philosophy,' and 'common-sense view,' the combination is treated as a single term.

Many who allow the use of systematic principles in other things are accustomed to cry up common-sense as the sufficient and only safe guide in reasoning. Now by common-sense is meant, I apprehend, (when the term is used with any distinct meaning,) an exercise of the judgment moulded by any art or system of rules; such an exercise as we must necessarily employ in numberless cases of daily occurrence; in which, having no established principles to guide us, no line of procedure, as it were, distinctly chalked out,—we must needs act on the best extemporaneous conjectures we can form. He who is eminently skilful in doing this, is said to possess a superior degree of common-sense. But that common-sense is only our second-best guide, that the rules of art, if judiciously framed, are always, distinctly chalked out,—we must needs act on the best extemporaneous conjectures we can form. He who is eminently skilful in doing this, is said to possess a superior degree of common-sense. But that common-sense is only our second-best guide, that the rules of art, if judiciously framed, are always, distinctly chalked out,—we must needs act on the best extemporaneous conjectures we can form. He who is eminently skilful in doing this, is said to possess a superior degree of common-sense. But that common-sense is only our second-best guide, that the rules of art, if judiciously framed, are always, distinctly chalked out,—we must needs act on the best extemporaneous conjectures we can form.

possess the knowledge of a system of rules; but in these points they differ any one who trusts to unaided common-sense. A sailor, e.g., will perhaps despise the pretensions of medical men, and prefer treating a disease by common-sense; but he would ridicule the proposal of navigating a ship by common-sense, without regard to the maxims of nautical art. . . . And the induction might be extended to every department of practice. Since, therefore, each gives the preference to unassisted common-sense only in those cases where he himself has nothing else to trust to, and invariably resorts to the rules of art, wherever he possesses the knowledge of them, it is plain that mankind universally bear their testimony, though unconsciously and often unwillingly, to the preferableness of systematic knowledge to conjunctural judgements.—*Whately, Elements of Logic, pref.*

6. Vulgar; mean; not distinguished by any excellence; often seen; easy to be had; of little value; not rare; not scarce.

Or as the man whom priuers do advance

And as the air blows it to me again,
Such is the lightness of your common men.

Was the word of a duncie, who herself was common.
Sir R. L. Estlin.

Hipparchus was going to marry a common woman,
but consulted Philander upon the occasion. *Speculator, iii. 375.*

9. In *Logic*. Applied to terms, or names, in opposition to individual, singular, or proper.

Common-terms, therefore, are called 'predicables,' (viz. affirmatively-predicables), from their capability of being affirmed of others: a singular-term, on the contrary, may be the subject of a proposition, but never the predicate, unless it be of a negative proposition; (as, e.g., the first-born of Isaac was not Jacob); or, unless the subject and predicate be only two expressions for the same individual object; as in some of the above instances. — *Whately, Elements of Logic, b. i. § 11.*

10. In Grammar. Applied, according to Johnson,

a. To Verbs; his words being:

'Such verbs as signify both action and passion are called common, as *despernor, I despise, or am despised.*'

This power, if not originally rare and exceptional, is now obsolete; its usual application being

b. To Nouns, i.e. to such as are either Masculine or Feminine as the case may be.

With words of this kind, the object to which they apply must be either male or female in the way of sex, whilst, in the way of grammar, its inflection must be indifferent: i.e. it must not be declined in a manner either exclusively masculine or exclusively feminine.

When combined with an Adjective or a Pronoun, and that in a language where the parts of speech have a well-marked distinction of gender, the common character of the Substantive is very apparent. This is the case in Latin, where *hic parens* denotes the father, *hec parens* the mother. The propriety, however, of the term is limited to the singular number. With *parentes* = parents, combined with an Adjective, though the objects denoted are of two sexes, the Adjective (or Pronoun) which applies to them has, from the nature of the case, only one form.

This shows that the meaning of the word Common is logical, rather than formal; and that it applies to the object rather than to the name. Neither in Pronouns nor in

Adjectives is there any such thing as a common inflection; i.e. a series of terminations separate from those of the Masculine, Feminine, and Neuter genders. That there is nothing of the kind in Substantives has been already stated.

Hence, the word under notice, as applied to gender, has been objected to, even as a term in the Latin language. In our own the objections to it are stronger. In English, words like *he* and *she* supply the only combinations in which there is a concord of gender at all: as, '*He* is a parent,' when speaking of a father; '*She* is a parent,' when speaking of a mother.

The term, however, is useful in general grammar; the cases to which it is restricted being those where there is one form for the Neuter and another for the Masculine and Feminine taken together; one form (roughly speaking) for things, and one for persons. Such is the case in the Danish and Swedish, where the words for husband and wife are of the same gender; this gender being one out of two, the other being a decided Neuter.

Even in English we have a true instance of a common gender in the word *who*, applied to men and women indifferently, as opposed to *what*, restricted to things; and which, along with *that* and *it*, is the only true neuter in our language.

Out of the common. Uncommon; extraordinary; generally suggesting approbation, i.e. difference in the way of excellence rather than defect. The use of the article *the* suggests that the construction is that of a substantive. It is probable, however, that the phrase is short for '*out of the common run or order.*'

Common, s. Anything pertaining to land (as the right of pasturage, fishing, turbary, or forest), equally and prescriptively enjoyed by many persons; especially, a piece of open ground so used.

Like to the empty ass, to shake his ears,
And graze in common. *Shakespeare, Julius Caesar, iv. 1.*

Is not the separate property of a thing the great cause of its endurance? Does any one respect a common as much as he does his garden?—*South.*

In the following phrases the construction is that of a substantive governed by a preposition, the result being a combination which is equivalent in sense to an adverb, though not itself adverbial in the way of grammar.

In common.

a. Equally to be participated by a certain number.

By making an explicit consent of every commoner necessary to any one's appropriating to himself any part of what is given in common, children or servants could not eat the meat which their father or master had provided for them as common, without assigning to every one his peculiar part.—*Locke.*

In this state of things, however, the Slavonophiles
of Poland ought to indulge no more in their empty
boast that their country escaped the feudal system.
At least, under the feudal system peasants easily
became proprietors; and if the feudal system, with
its variety of tenures, and its numerous social
gradations, had existed in Poland, it would not be so
easy as it is now to divide the country into two great
classes, and to paralyze all national action by rais-

name of patriotism.—*S. Edwards, The Polish Repub-

Competible. *adj.* [In most cases Compatible and Compatible may be looked on as separate words; the one from the root *pet-*, in *pet-o* = seek; the other from the root *pat-*, in *pat-i-or* = suffer.

On the other hand, the ideas conveyed by the two roots are allied, inasmuch as two persons seeking the same thing, when actively employed, are much in the same category as two persons influenced by the same desire of seeking. In things, the tendency to confusion is stronger; and, whatever may be the case with accurate writers, it is beyond doubt that *compatible* is often used for *competible*, when applied to objects. And this reasonably, inasmuch as the object looked on as a thing sought (or *competible*) is, at the same time, an object which causes the search; in which the searchers are, so far as they are acted on by it as a stimulus, recipients of the same, and, as such, more or less passive. 'The two things are not *competible*' may be translated 'the two things are not to be sought at the same time (*competible*);' but it may also mean, 'the two things are not tolerable, endurable, or admissible (*compatible*) together.' In the negative, *incompatible*, the fusion of the two meanings is equally clear.

The use of *competible* for *compatible* is not so common. Hence, the fact which presents itself in so many other words presents itself here. There are several meanings of both *competible* and *compatible*, which can clearly be separated from each other. At the same time there are several instances where there is an actual confusion between the two words, especially when we test them by the etymological question as to whether it is *pet-* or *pat-* that they come from.]

the wisest range of this political *complaisance* is

Complement. *s.* [see *Complete*.] Complement and complement, the one with the *e*, and the other with the *i*, are the same words; in respect, at least, to their etymology.

Of the two *Complement* is the better
form. Both name from *pleo* = fill, of which
the participle and the other secondary forms
are in *e*, as *completus, completio*.

The import of both the elements,
the *cum* indicating conjunction, and the *pleo*
indicating fulfillment, is that some integral,
or unit, is made full, or *complete*, in the
sum of its constituent parts.

These are looked on as *two*; *two* and no
more. What is not expressed on the one
side must be made up on the other.

This makes the word *difference* in Arith-
metic a good illustration. If 10 is the in-
teger, 7 and 3 are complements to each
other. One or the other makes up the
difference between the number given as a
part of a whole and the whole, or sum total,
itself.

But in every object of thought which can be divided into two, this same difference presents itself, and in many sciences the word *complement* is technically used instead of *difference*.

In Optics, where a third colour added to two others makes white, that third colour is the *complementary* one. See *Complementary*.

In Logic, the word *universe* has the same import as *sum* or *total* in Arithmetic, meaning the whole class of objects under consideration as elements of a class; of which those under definite notice are one part, while the indefinite remainder is the *complement*.

And so it is in other departments of enquiry. The derivatives *Complemental* and *Complementary* follow the same rule. They all indicate the difference between that which is expressly named and the unnamed remainder.

So much for the genuine form in *e*. The form in *i*, logically, is much the same, though its application is to a wholly different range of subject matter. When we send our *compliments* to anyone, we give the difference between what is definitely expressed and the indefinite remainder, which, to be worth alluding to at all, is necessarily of the nature of a civility. Hence *compliments* are a civil sort of *et cetera*; and, as such, *complementary*. The somewhat less usual equivalent of 'say all that is necessary,' illustrates this. So does, though more remotely, 'make it up,' or 'make up the difference;' though this, in many cases, lies nearer to another explanation.

This applies to *my compliments*, &c., when the substantive is plural; the essence of which is its indefinitude, an indefinitude which is contrasted with what is said or done definitely, while at the same time it shows that what is said or done is not all.

In the singular number this particular sort of indefinitude disappears, but only to be superseded by an indefinitude of another kind. As a general rule, a *compliment* means something which, though very definite as a fact, is never supposed to be definite as to its motive (as sincere or insincere), or its value (as true or false), or its object (as strictly honest, or the contrary); herein, i.e. in the silence as to its details and bearing, lying its indefinitude. A *bribe*, than which nothing as a fact is more definite, is just the thing that is spoken about most indefinitely; and there is no euphemism which is commoner than *compliment for bribe* or something like it.

Such is the connection between two words of the same origin, the same sound, and, within one vowel, the same spelling, one of which may mean *some particular colour*, and the other a *civil saying*, a *formal call*, or a *bribe*.

With a result so similar, and a meaning so different, it is probable that the difference in spelling is one which was intentionally adopted for the sake of expressing the difference, i.e. on the grammatical principle of *ob differentiam*. But on this point it is unsafe to speak decidedly. All that can be said is that *Complement* is often spelt *Compliment*; *Complement* being less frequently spelt *Compliment*.

There are three operations (or states) of the mind which are immediately concerned in argument: which are called by logical writers, 1st. Simple apprehension; 2d. Judgment; 3d. Discourse or reasoning. 1st. Simple apprehension is the faculty by which the mind perceives the notion of any object; and which is analogous to the perception of the senses. It is either *incomplex* or *complex*; *incomplex* apprehension is of one object, or of several without any relation being perceived between them, as of 'a man,' 'a horse,' 'marks'; *complex*, is of several with such a relation, as of 'a man on horseback,' 'a pack of cards.' 2d. Judgment is the comparing together in the mind two of the notions (or ideas) which are the objects of apprehension, whether *complex* or *incomplex*, and pronouncing that they agree or disagree with each other; (or that one of them belongs or does not belong to the other.) Judgment, therefore, is either affirmative or negative. 3d. The poets of this age had in general a just taste. . . . There may be observed, however, some difference between the authors who lived before the middle of the century and those who followed them. The former were more attentive to imitate Petrarch. . . . The latter writers, in order to gain more applause, deviated in some manner from the spirit of Petrarch, seeking ingenious thoughts, florid *concepts*, spiritual ornaments.—*Hallam, Introduction to the Literature of Europe in the Fifteenth, Sixteenth, and Seventeenth Centuries*, p. ii. ch. v. § 3.

Conceit. *v. a.* Conceive; imagine; think; believe. *Obsolete*.

Conceivability, s. Capability of being conceived. See Inconceivability.

Conceivable, adj. Capable of being imagined or thought.

It is not conceivable that it should be indeed that very person, whose shape and voice it assumed. — *Bishop Atterbury, Sermons.*

Probabilities, we apprehend, did not enter at all into his consideration: his object was, to produce effect — to exalt and dilate the character through whom he was to interest or amuse us — and to raise our conception of it, by all the helps that could be derived from the majesty of nature, or the dread of superstition. It is none, therefore, if the situation in which he has placed him is conceivable, and if the suggestion of its reality enhances our raptures and kindles our imagination, for it is manifested only that we are required to fear, in pity, or admire. — *Jeffery, Essay on Belief.*

Again, the case is conceivable of a corporation, or an ecclesiastical body, going on for centuries in the performance of the routine-business which came in its way, and preserving a good understanding between its members, with statutes almost a dead letter and no precedents to explain them. — *Scarnon, Essay on the Development of Christian Doctrine, ch. iii. §. 4.*

If, as Sir William Hamilton says, those propositions only are conceivable of which subject and predicate are capable of unity of representation, then is the subjectivity of space inconceivable; for it is impossible to bring the two notions, space and property of the ego, into unity of representation. — *Herbert Spencer, Principles of Psychology, pt. i. ch. iii.*

Conceivableness, s. Attribute suggested by Conceivable.

Not to dwell upon the fact that his whole argument turns upon the existence of space and time, and that for the belief in their existence the universal postulate is his sole warrant; and only observing, by the way, that the distinction he draws between these and other things, hinges entirely upon conceivableness and inconceivableness; let us go on to remark, that he infers from our inability to conceive the annihilation of space and time, joined with our ability to conceive the annihilation of all other things — he infers from these facts, that space and time are receptivities, subjective conditions and not objective realities. We can conceive both non-existent; we cannot conceive time and space non-existent; therefore, time and space are forms of thought. — *Herbert Spencer, Principles of Psychology, pt. i. ch. iii.*

Conceivably, adv. In a conceivable manner; intelligibly.

• The first thing God did, or possibly and conceiv-

ably could do, was to determine to communicate Himself; and did so accordingly. — *Bishop Montague, Appeal to Caesar, p. 61.*

A snow-drift which obstructs a road, and a vein of valuable ore, may conceivably each furnish employment for an equal number of labourers. — *Whately, Elements of Logic, b. iii. §. 10.*

Conceive, v. a. [directly from Fr. *concevoir*, which is from Lat. *concipio*, a compound of *con* and *cipio* — take.]

1. Form in the mind; imagine.

If you compare my gentlemen with Sir John, you will hardly conceive him to have been bred in the same climate. — *Swift.*

Similarly, though men may have thought some things inconceivable which were not so, there may still be inconceivable things; and the inability to conceive the negation of a thing, may still be our best warrant for believing it. Conceiving the entire truth of Mr. Mill's position, that, during any phase of human progress, the ability or inability to form a specific conception wholly depends on the experiences men have had; and that, by a widening of their experiences, they may, by and by, be enabled to conceive things before inconceivable to them; it may still be argued that us, at any time, the best warrant men can have for a belief is the perfect agreement of all pre-existing experience in support of it, it follows that, at any time, the inconceivableness of its negation is the deepest test any belief admits of. — *Herbert Spencer, Principles of Psychology, pt. i. ch. iii.*

We can neither conceive, on the one hand, an ultimate minimum of space or time; nor can we, on the other, conceive their infinite divisibility. In like manner, we cannot conceive the absolute commencement of time, nor the utmost limit of space, and are yet equally unable to conceive them without any commencement or limit. — *Sir W. Hamilton, Edition of Reid, p. 377.*

2. Admit into the womb; form in the womb.

I was shaped in iniquity, and in sin did my mother conceive me. — *Psalms, li. 5.*

Conceive, v. n.

1. In the following instances, and in most (if all) others, the construction seems to have arisen out of the notion that conceive = think, and that we can conceive of an object what we think of it. But thinking of an object is different from thinking it; and in Metaphysics, where this distinction is important, to conceive — think in the latter sense only.

The griev'd commons
Hardly conceive of me: let it be told'st,
That, through our intercession, this revocation
And pardon comes. — *Shakespeare, Henry VIII. i. 2.*

Birds, winds, and waters sing with sweet concément. — *Fairfax, Translation of Tasso, xviii. 19.*
That undisturbed song of pure concément,
Aye sung before the sapphire-colour'd throne
To Him that sits there.

centre; have the same centre with something else.

The bricks having first been formed in a circular mould, and then cut, before their burning, into four quarters or more, the sides afterwards join so closely, and the points concéntré so exactly, that the pillars appear one entire piece. — *Sir H. Wotton.*

If, as in water stirr'd, more circles be
Produced by one, how such additions be;
Those, like so many spheres, but one they make.

For they are all one struck unto thee.

— *Donne, Poems, p. 27.*

Any substance, pitched skilfully upon two points, as on an axis, and moving about that axis, also describes a circle concentric to the axis. — *Morgan, Mechanical Exercises.*

Circular revolutions in concentric orbits about the sun, or other central body, could in no wise be attained without the power of the Divine arm. — *Buttley, Sermons, 7.*

Concéntrical, adj. Same as Concentric.

The manner of its concéntration is by concentric rings, like those of an onion about the first kernel. — *Arbuthnot, On the Natural Choice of Aliments.*

Milton, full of these Platonick ideas, has here a reference to this concénual or *concentual* song of the ninth sphere, which is undisturbed and pure, that is, unalloyed and perfect. — *T. Warton, Notes on Milton's smaller Poems.*

Concept. s. [Lat. *conceptum* = thing conceived.] Object conceived by the mind; mental representation, considered as the result of an act of conception, rather than the act itself. See **Conception**.

Let us form to ourselves a *concept* of the universe. What is true of our *concept* of creation holds of our *concept* of annihilation. — *Sir W. Hamilton, Discussions on Philosophy and Literature*, p. 592.

The subjectivity of time and space being, he alleges, irresistible as an inference, he insists on it as a fact, and so receives it as a fact involves two impossibilities—the forming of *concepts* of time and space as subjective forms, and the abolition of the *concepts* of time and space as objective realities. — *Herbert Spencer, Principles of Psychology*, pt. i. ch. iii.

If, then, Hume's argument claim to be anything more than a string of logical forms containing no substance, its first term—an impression—must be used only as the representative of a definite *concept*; and no such definite *concept* can be formed without two other things—the impressing and the impressed—being involved. — *Ibid.*

In proportion as the number of *concepts* which a proposition involves is great, and the mental transitions from *concept* to *concept* are numerous, the fallibility of the test will increase. — *Ibid.*, ch. ii.

Conceptacle. s. [Fr. *conceptacle*; Lat. *conceptaculum*.] That in which anything is contained; vessel; receptacle.

There is at this day resident, in that huge *conceptacle*, vast enough to effect such a deluge. — *Wardlaw, Essay towards a Natural History of the Earth*, preface.

Conceptible. adj. Conceivable. *Rare.*

Some of his attributes, and the manifestations thereof, are not only highly debatable to the intellectual faculty, but are most suitable and easily *conceptible* by us, because apparent in his works. — *Sir M. Hale, Origination of Mankind*.

Conception. s. Result or process of conceiving: (*mental or physical*). See **Concept**.**1. Concept:** (the distinction indicated under that word being either not recognized, or overlooked).

As *conceptions* are the images or resemblances of things to the mind within itself, in the like manner are words or names the marks, tokens, or resemblances of those *conceptions* to the minds of them whom we converse with. — *South, Sermons*.

Consult the acutest poets and speakers, and they will confess that their quickest, most admired *conceptions* were such as darted into their minds, like sudden flashes of lightning, they knew not how, nor whence; and not by any certain consequence, or dependence of one thought upon another, as it is in matters of calculation. — *Ibid.*

To have right *conceptions* about them, we must bring our understandings to the inflexible natures and unalterable relations of things, and not endeavour to bring things to any preconceived notions of our own. — *Locke*.

2. Act of which a concept (in the strict sense of the term) is the result.

And as if heads conceiv'd what reason were,
And that *conception* should distinctly show
They should the name of reasonable bear;
For, without reason, none could reason know.

Sir J. Davies.

A form of words uniting attributes not present in an intuition, is not the sign of a thought, but of the negation of all thinking. *Conception* must thus be carefully distinguished, as well from mere imagination, as from a mere understanding of the meaning of words. Combinations of attributes logically impossible may be expressed in language perfectly intelligible. There is no difficulty in understanding the meaning of the phrase *Biliverin* Figure, or Iron-gold. The language is intelligible, though the object is inconceivable. — *Mansel, Prolegomena Logica*.

3. Notion; iden, in general.

Thou hast remember'd me of my own *conception*. I have perceived a most faint neglect of her; which I have rather blamed as my own jealous curiosity, than as a very pretence and purpose of unkindness. — *Shakespeare, King Lear*, i. 4.

Please your highness, note
His dangerous *conceptions* in this point:
Not friendly by his wish to your high person,
His will is most malignant, and it stretches
Beyond you to your friends. — *Id., Henry VIII.* i. 2.

4. Conclit; sentiment; pointed thought.

He is too flatulent sometimes, and sometimes too

dry; many times unequal, and almost always forced; and besides, is full of *conceits*, points of epigram, and witticisms; all which are not only below the dignity of heroic verse, but contrary to its nature. — *Dryden, Dedication to Translation of Juvenal*.

5. Act of conceiving, or growing quick in pregnancy.

I will greatly multiply thy sorrow, and thy *conception*; in sorrow thou shalt bring forth children. — *Genesis*, iii. 16.

Thy sorrow I will greatly multiply
By thy *conception*; children thou shalt bring
In sorrow forth. — *Milton, Paradise Lost*, x. 103.

Conceptions. adj. Apt to conceive; fruitful. *Rare.*

Enshew thy fertile and *conceptions* womb;
Let it no more bring out ingrateful man.

Shakespeare, Timon of Athens, iv. 3.

Conceptive. adj. Capable of, or active in, conceiving: (*mentally or physically*).

In hot climates, and where the uterine parts exceed in heat, by the coldness of this simple they may be reduced into a *conceptive* constitution. — *Sir T. Browne, Vulgar Errors*.

Exception might be taken to this argument on several grounds — on the ground that space and time in the abstract, are not strictly conceivable things at all in the sense that other things are; on the ground that the alleged inconceivableness of a minimum or a limit is not really of the same nature as those with which it is classed — is not due to an arrest of the *conceptive* power, but a baffling of it — is not an inability to put one *conception* in place of another, but an inability to form any *conception*. Moreover, it might be urged that there is no true parallelism between these cases in which both alternatives are alike inconceivable, and all other cases, in which one alternative is conceivable and the other not. — *Herbert Spencer, Principles of Psychology*, pt. i. ch. iii.

Conceptualism. s. In *Metaphysics*. System in which more attention is paid to the relation between a mental object and the mind which conceives it, than to either the object (*res*) itself with reference to the nature of things in themselves, or to the name (*nomen*) as suggestive of the class to which it belongs; hence intermediate to Realism and Nominalism.

The close of all Albert the Great's intense labours, of his enormous assemblage of the opinions of the philosophers of all ages, and his efforts to harmonize them with the high Christian theology, is a kind of eclecticism, an unreserved realism, *conceptualism*, nominalism, with many of the difficulties of each. — *Milman, History of Latin Christianity*, h. xiv. ch. iii.

The *conceptualism* or eclecticism of St. Thomas (he cannot be called a Nominalist) admitted so much realism under other forms of speech; the Realism of St. Thomas was so absolutely a realism of words, reality was with him something so thin and unsubstantial; the Ascendatism of St. Thomas was so guarded and tempered by his high ethical tone, by his assertion of the holiest Christian morality; the Pelagianism charged against Scotus was so purely metaphysical, so balanced by his constant, for him vehement, vindication of Divine grace, only with notions pernicious to his philosophy, of its mode of operation, and with almost untraceable distinctions as to its mode of influence, that nothing less than the inveterate pugnacity of scholastic teaching, and the rivalry of the two orders, could have perpetuated the strife. — *Ibid.* h. xiv. ch. iii.

Conceptualist. s. (construction often *adjectival*, as in '*conceptualist doctrine*,' '*conceptualist principles*,') Supporter of the doctrine of Conceptualism.

St. Thomas (Aquinas), like his predecessor, Albert, on the great question of universals, is eclectic; neither absolutely realist, *conceptualist*, nor nominalist. Universals are real only in God, and but seemingly, in potentiality rather than actuality; they are subjective in the intelligence of man; they result objectively in things. — *Milman, History of Latin Christianity*, h. xiv. ch. iii.

Concern. v. a. [Fr. *concerner*.] See **Disconcert**.**1. Relate, belong, or be of importance, to anything.**

2. Interest; engagement.

'Tis all mankind's *concern* that he should live.

3. End; last part.

I can speak no longer, yet I will strain myself to breathe out this one invocation, which shall be my *conclusion*.—*Hovell*.

4. In *Logic*. Inferential proposition of a syllogism, as compared, or contrasted, with the premises.

He granted him both the major and the minor; but denied him the *conclusion*.—*Addison, Freeholder*.

In pursuing the supposed investigation, it will be found that every *conclusion* is deduced, in reality, from two other propositions; (thence called premises); for though one of these may be, and commonly is, suppressed, it must nevertheless be understood as admitted. . . . It is evidently immaterial to the argument whether the *conclusion* be placed first or last; but it may be proper to remark, that a premise placed after its conclusion is called the *resumen* of it, and is introduced by one of these conjunctives which are called *enunci*; viz. *since*, *because*, &c., which may indeed be employed to designate a premise, whether it came first or last. The illustrative sum-

junctions, 'therefore,' &c., designate the *conclusion*. It is a circumstance which often occasions error and perplexity, that both these classes of conjunctions have also another signification, being employed to denote, respectively, cause and effect, as well as premise and conclusion: e.g. If I say, 'this ground is rich, because the trees on it are flourishing,' or 'the trees are flourishing, and therefore the soil must be rich,' I employ these conjunctions to denote the connection of premise and conclusion: for it is plain that the luxuriance of the trees is not the cause of the soil's fertility, but only the cause of my knowing it.—*Whately, Elements of Logic*, b. i. § 2.

Every argument consists of two parts: that which is proved, and that by means of which it is proved. The former is called, *before* it is proved, the question; when proved, the *conclusion*, (or inference); that which is used to prove it, if stated last, (as is often done in common discourse), is called the reason, and is introduced by 'because,' or some other causal conjunction; e.g. 'Caesar deserved death, because he was a tyrant, and all tyrants deserve death.' If the conclusion be stated last (which is the strict logical form, in which all reasoning may be reduced,) then, that which is employed to prove it is called the premises, and the conclusion is then introduced by some illative conjunction, as 'therefore,' &c.

'All tyrants deserve death:
Caesar was a tyrant;
therefore he deserved death.'

Since, then, an argument is an expression in which 'from something laid down and granted as true (i.e. the premises) something else (i.e. the conclusion) beyond this must be admitted to be true, as following necessarily (resulting) from the other;' and since logic is wholly concerned in the use of language, it follows that a syllogism (which is an argument stated in a regular logical form) must be 'an argument so expressed, that the conclusiveness of it is manifest from the mere force of the expression,' i.e. without considering the meaning of the terms: as in this syllogism, 'Every Y is X, Z is Y, therefore Z is X,' the conclusion is inevitable whatever terms X, Y, and Z respectively are understood to stand for. And to this form all legitimate arguments may ultimately be brought.—*Ibid.* b. i. ch. iii. § 1.

5. Inference, in general.

The conclusion of experience, from the time past to the time present, will not be sound and perfect.—*Bacon, War and Peace*.
And unerring divers principles and grounds,
Out of their match a true conclusion brings.

Then doth it fly the good, and ill pursue. *Ibid.*

Conclusions of astrology. *Butler, Husbands*.

Consideration of things to be known, of their several weights, *conclusiveness*, or evidence.—*Sir M. Hale, Origin of of Mind*.

It is judiciously remarked by Dugald Stewart, that though our reasonings in mathematics depend entirely on the axioms, it is by no means necessary to our seeing the *conclusiveness* of the proof, that the

axioms should be expressly adverted to.—*J. S. Mill, System of Logic*.

Even if you suppose a case where one or both of the premises shall be manifestly false and absurd, this will not alter the *conclusiveness* of the reasoning; though the conclusion itself may perhaps be absurd also. For instance, 'All the apes-trike are originally descended from reptiles or insects; mankind are of the apes-trike; therefore mankind are originally descended from reptiles or insects.' Here, every one would perceive the falsity of all three of these propositions. But it is not the less true that the conclusion follows from these premises, and that if they were true, it would be true also.—*Whately, Elements of Logic*, b. i. § 3.

If one or both of the premises be merely probable, we can infer from them only a probable conclusion; though the *conclusiveness*,—that is, the connection between the premises and the conclusion—is perfectly certain. For instance, assuming that 'every month has 30 days,' (which is palpably false,) then, from the minor-premise that 'April has 30 days,' (which happens to be true,) it follows that 'April has 30 days;' and from the minor premise that 'February is a month,' it follows that 'February has 30 days,' which is false. In each case the *conclusiveness* of the argument is the same; but in every case, when we have ascertained the falsity of one of the premises, we know nothing (as far as that argument is concerned) of the truth or falsity of the conclusion.—*Ibid.* b. i. ch. iii. § 1.

Concoégulate. r. a. Cuddle or congenial one thing with another. *Rare*.

and an ephod.—*W. Montague, Devout Essays, p.
174.*

Concordat. s. [Fr.] See next entry.

It is true that at the close he had been
used by the subtle and pernicious churchman;
Martin V. had regained the lost ground; a barren,
ambiguous, delusive concordat had baffled the pe-
remptory demand of Germany for a reformation of
the church in its head and in its members.—*Mil-
man, History of Latin Christianity, b. xiv. ch. vii.*

Concordate. s. Agreement; compact; con-
vention: (specially one on ecclesiastical
matters, and, more specially still, one to
which the Pope is one of the parties).
*Common in modern political writings in
its French form Concordat.*

How comes he to number the want of synods in
the Gallican church among the grievances of that
concordate, and as a mark of their shewery, since he
reckons all convocations of the clergy in England to
be useless and dangerous?—*Swift.*

Concorporate. v. a. [Lat. *con* + with, *cor-
pus* = body.] Unite in one mass or sub-
stance. *Rare.*

(as we see one drop of water diffuseth itself, and
runs into another), so temptations to sin meeting
with a sinful nature, are presently entertained, and
as it were embodied together.—*Bishop Hopkins,
Exposition on the Lord's Prayer, p. 130.*

Thus we chastize the soul of wine
With water that is foulness,
Until the cooler nymph abate
His wrath, and so *concorporate*. *Clearland.*

Concourse. s. [Lat. *concursum*; from *con*
and *cursum*, part. of *curro* = run.]

1. Confluence of many persons or things to one place.

The coalition of the soul frame of the universe
was not the product of chance, or fortuitous con-
course of particles of matter.—*Sir M. Hale, Origina-

With such a *concourse* comes the flood of ill.

3. Point of junction or intersection of two bodies. *Obsolete.*

As soon as the upper glass is laid upon the lower,
so as to touch it at one end, and to touch the drop
at the other end, making with the lower glass an
angle of about ten or fifteen minutes; the drop will
begin to move towards the *concourse* of the glasses,
and will continue to move with an accelerated mo-
tion, 'till it arrives at that *concourse* of the glasses.
—*Sir I. Newton.*

4. Concurrence; agreement. *Obsolete.*

He that aims at a good end, and knows he uses
proper means to attain it, why should he despair of
success, since effects naturally follow their causes,
and the divine providence is wont to afford its con-
currence to such proceedings?—*Bacon, Sermons,
ol. i. ser. 1.*

No creature can move, or act, or do anything,
without the end verse and co-operation of God.—*Bishop Sherlock, Discourse on Providence, ch. ii.*

Concreate. v. a. Create at the same time.
Rare.

Upon loving God above all, and our neighbours as
ourselves, hung all the law and the gospel. And

the apostle calls the royal law; which if we fulfil, we
do well.—*Pellam, Rules, ii. 3.*

Concredit. v. a. Intrust; commit upon
trust; credit. *Obsolete.*

The which reason may well be applied to exen-

Bishop of Rochester, p. 2: 1772.*

Concrement. s. Mass formed by concre-
tion; collection of matter growing to-
gether. *Rare.*

homogeneous consistency, like clay, and thereby it is pre-

Hale, Origination of Mankind.*

Concrecence. s. Act or quality of growing
by the union of separate particles.

Seeing it is neither a substance perfect, nor inclu-
sive, how any other substance should thence take
concrecence hath not been taught.—*Sir W. Raleigh,
History of the World.*

Concreate. s. Coalesce into one mass;
grow by the union and cohesion of parts.

The mineral or metallic matter, thus *concreating*
with the crystalline, is equally diffused throughout
the body of it.—*Woodward, Essay towards a Na-
tural History of the Earth.*

When any saline liquor is evaporated to a cuticle,
and let cool, the salt *concreates* in regular figures;
which argues that the particles of the salt, before
they *concreated*, floated in the liquor at equal dis-

The blood of some who died of the plague, could
not be made to *concrete*, &c. *Arbuthnot.*

The first *concrete* state, or consistent surface of
the chaos, must be of the same figure as the last
liquid state.—*Bishop Burnet.*

2. In Logic. Not abstract: (applied to a subject).

A kind of mutual commutation there is, whereby
those *concrete* names, God and man, when we speak
of Christ, do take interchangeably one another's
room; so that, for truth of speech, it skilleth not
whether we say that the Son of God hath created
the world, and the Son of man by his death hath
saved it; or else that the Son of man did create, and
the Son of God died to save the world.—*Hooker.*

Concrete terms, while they express the quality, do
also either express or imply, or refer to some subject
to which it belongs, as white, round, long, broad,
wise, mortal, living, dead; but these are not always
nominal adjectives in a grammatical sense; for a knave,
a fool, a philosopher, and many other *concretes*, are
substantives, as well as knavery, folly, and philoso-
phy, which are the abstract terms that belong to
them.—*Watts, Logic.*

(See also extract from Mill, under Abstract.)

—*Beattie, Sermons.*

2. In Logic. See last extract under prece- ding entry.

3. In Building. Compound of ballast or stone chippings, sand, and lime.

infallible remedy against settlement. *Credt, En-
cyclopædia of Architecture, b. ii. ch. ii. § 11.*

(Ord MS.)

[This word is the parent of a joke, reflecting on Dr. Adam Littleton, the well-known author of a Latin dictionary, which has been so confidently asserted in 'Anecdotes of the English Language', as well as in other publications, that I think it right to show the inaccuracy of the pretended narrative, and to undeceive the wits as well as the more sober investigators of lexicography.]

When Dr. Littleton was compiling his dictionary, and announced the verb *concurrere* to his amanuensis, the scribe, imagining that the various senses of the word would, as usual, begin with the most literal translation, said, *concurrere*, I suppose, sir, to which the doctor replied perisively—*concurrere*! *concurrere*! The secretary, whose business it was to write what his master dictated, accordingly did his duty; and the word *concurrere* was inserted, and is actually printed as one interpretation of *concurrere* in the first edition, 1678, (to be seen in the British Museum,) though it has been expunged, and does not appear in subsequent editions. [Pegge's Anecdotes of the English Language.] But *concurrere* had before appeared in English lexicography. In Cockeram's English dictionary, under *The Agree*, in the second part, (I am citing from the edition of 1672,) are these definitions, '*concurrere*, *concurrere*, *concurrere*.' Littleton therefore cited what had before been used, but justly disclaimed it afterwards; though the editors of the Cambridge dictionary in 1673 thought proper to admit it under *concurrere*.—*Johnson*, in previous editions.]

2. In *Grammar* and *Logic*. Expressive of some condition or supposition; hypothetical.

Hypothetical, conditional, concessive, and exceptive conjunctions seem in general to require a subjunctive mood after them.—*Bishop Lowth, English Grammar*.

We have an example of this when the simple propositions are connected by the particle Or; as, Either A is B or C is D; or by the particle If;

as, A is B if C is D. In the former case, the proposition is called disjunctive, in the latter conditional; the name hypothetical was originally common to both. As has been well remarked by Archbishop Whately and others, the disjunctive form is resolvable into the conditional; every disjunctive proposition being equivalent to two or more conditional ones. Either A is B or C is D; means, if A is not B, C is D; and if C is not D, A is B. All hypothetical propositions, therefore, though disjunctive in form, are conditional in meaning; and the words hypothetical and conditional may, as indeed they generally are, used synonymously. Propositions in which the assertion is not dependent on a condition, are said, in the language of logicians, to be categorical.—*J. S. Mill, System of Logic*, I. iv. § 3.

Hamilton, Discussions on Philosophy and Literature*, p. 601.

Conditioned. *adj.* The verb Condition, whether active or neuter, is generally, and perhaps always, connected with the substantive in its sense of stipulation or contract; the adjective Conditioned is generally connected with the substantive in its sense of temper, quality, or state.

But as we rarely speak of anything as simply having a state or quality in general, the latter word is rarely found alone but, on the contrary, preceded by some word suggesting goodness or badness.

The malice of his worst-conditioned neighbours—*Florida, First Fruits*, pref.: 1598.

The dearest friend to me, the kindest man—*Id.*

The best-condition'd.—*Shakespeare, Merchant of Venice*, III. 2.

The sign ? preceding the fifth notice of the word *Condition* implied a doubt, the nature of which will now be considered. The element of uncertainty presented by the word *concrete* repeats itself here. Just as one particular form *concretus* is common to two different verbs, so is the word *conditio* (according, at least, to the ordinary pronunciation) a derivative common to two bases.

There is the verb *condo* = build, of which the infinitive is *condere*, the participle *conditus*, and the derivative substantive *conditio*; the vowel being short throughout. There is also the verb *condio* = preserve, season, spice, &c.; and of this the infinitive is *condire*, the participle *conditus*, and the derivative substantive *conditio*; between which and its parallel there is only the difference in the quantity, one which, with our pronunciation, allows us to consider the two forms as practically identical.

That there are several usages of the word *condition* and its derivatives, which are at least as closely connected with the idea of preservation, keeping in order, or good keeping, as with that of building or construction, is shown by such expressions as 'in good or bad condition,' 'out of condition,' and the like, as well as by the compounds given in the extracts.

Hence, although it would be difficult to prove that in any particular instance *condition* comes from *conditio*, it would be equally unsafe to affirm that in every instance it comes from *conditio*.

There are three perfectly distinct modes in which the surface of the earth becomes cooled, and these are by evaporation, by *conduction*, and by radiation. ... The second mode in which plants are cooled is by *conduction*, or by the mere contact of cold air; and this quite independent of the cold produced by evaporation. When a cold wind drives along the surface of the ground, it gradually cools it, and, of course, likewise the plants growing on it, by the simple abstraction or carrying away of the heat. So long as the surrounding air is colder than the plants it will tend to reduce their temperature; and if the air is in motion, as fresh portions of cold air must gradually come in contact with the plants, they must gradually get colder and colder, even though no evaporation take place, until they become as cold

as the air itself.—*Lindley, Theory and Practice of Horticulture*, h. l. ch. ii.

a. In Heat.

If, in winter, a person with bare feet were to step from the carpet to the wooden floor, from this to the hearthstone, and from the stone to the steel fender, his sensation would deem each of these in succession colder than the preceding. Now, the truth being that all possess the same temperature, only a temperature inferior to that of the living body, the best *conductor*, when in contact with the body, would carry off the heat the fastest, and would therefore be deemed the coldest.—*Dr. Arnott, Elements of Physics*, pt. i. p. 25.

b. In Electricity.

A metal rod is to be fixed to one of the extremities of a stick of glass or wax; . . . the stick . . . is then to be rubbed. . . Small light bodies are then brought near; they are immediately attracted by the metal rod, as they would have been by the glass or wax itself. . . . From this experiment we must conclude that the agent has been developed by the friction upon the glass or wax passed into the metal; since the latter has been found to be electrical without having been rubbed, and merely because it is in contact with a body that has itself been electrified. Were a glass rod, a piece of wax . . . put in place of the metal rod, it would not have acquired electricity by its simple contact with the electrified body. This property . . . of acquiring and propagating through their whole extent the electricity possessed by the part of an electrified body with which they are placed in contact, is called *conductibility* for electricity, or *electric conductivity*. Bodies which possess this property are termed *conductors*, and those which possess it not *insulators*. The human body, wool, especially damp wool, and in general animals, vegetables, and a great number of mineral substances, are like the metals, *conductors* of electricity. The globe of the earth is equally so; on the contrary, atmospheric air, especially when very dry, is not so. . . . An electric surface that is put in communication with the ground, by means of one or several *conducting* bodies must lose its electricity.—*De la Rue, Treatise on Electricity*, pt. i. ch. i. trans.

It has been proved by M. du Bois-Reymond that when any point in the longitudinal section of a muscle is connected by a *conductor* with any point in its transverse section, an electric current is established; and further, that like results occur when nerves are substituted for muscles.—*Herbert Spencer, Data of Biology*, § 10.

Whether a nerve is merely a *conductor*, which delivers at one of its extremities an impulse received at the other; or whether, as some now think, it is itself a generator of force which is initiated at one extremity and accumulates in its course to the other extremity; are also questions which cannot yet be answered.—*Ibid.*, § 21.

Conglaciato. v. n. [Lat. *conglaciatus*, part. of *conglacio* = freeze; from *glacies* = ice.] Turn to ice.

No other doth properly *conglaciato* but water; for the determination of quicksilver is properly fixation, and that of milk conglutination. — *Sir T. Browne, Vulgar Errors.*

This being the first word of a class, it demands, upon a principle already suggested, some remarks.

The rule, as laid down under Co. 2., respecting the sound of *n* as the final consonant in *con* or *cun* in composition, is to the effect that before *g* it is sounded, not as the *n* in *kin*, but as the *ng* in *king*; an essentially different sound, though the spelling conceals the difference.

Words that give the combination *-ngl-*, are *apparent* exceptions to this; only, however, *apparent* ones.

It is submitted to the experience of the reader that he sounds the *n* in words like *conglomerate* as a pure *n*; in words like *conclude* as the *ng* in *king*. How far is this an exception to the rule laid down? The rule applies to the sound only, not to the spelling. Now the sound of the *g* in *conglomerate* is not the sound of an ordinary *g*. Even in spelling phonetically, though we should write *concluce* as *kong-khū*, we should not write *conglomerate* as *kong-glu-murāt*.

Webster has probably surprised many of his readers by stating that the actual sound of *glory* is *dlogy*. If so, the sound which follows *n* in *conglomerate* is not that of *g*, but that of *d*; for the rule applies to both words, i.e. to the whole class beginning with *gl*.

Hence, the rule for the *g* in *gl-* is the rule for *dl-*.

Professor Max Müller has noticed this statement of Webster, and without any very strong protest; his remarks suggesting the difficulty of dealing with the question. After giving several examples of essentially different sounds being not only unconsciously confounded in different languages, but continuing to be confounded even after the distinction has been pointed out, he adds that barbarous dialects are not the only forms of speech which exemplify this phenomenon, but that the same may be found in the French (of Canada) and in English; the combination in question, according to the authority just quoted, being the particular instance supplied by the latter language.

Whether we really say *dlogy*, while we fancy that we say *glory*, is surely worth enquiry; also is it worth enquiry whether our ear in the matter is so untrained to phonetic distinctions as not to enable us to say whether we do so or not.

The opinion of the editor is, that, if rightly pronouncing *glory* means giving to the *g* the exact sound given to it in *gory*, we do not so pronounce it. On the contrary, we pronounce it as an approximation, to say the least, to *d*. Moreover, as a general rule, our ear alone does not detect the aberration. It only does so when checked by a certain amount of attention given to the oral conditions under which the sound is formed, combined (as in the present case) with certain phenomena connected with certain combinations.

This, at any rate, it is safe to say; that whoever pronounces the *n* in *conglomerate* or *conglomerate* as a pure *n*, i.e. not as *ng*, does not pronounce the *g* exactly as the *g* in *gun*.

Conscience, or Consciencey. s. [Lat. *con* and *scientia* = be born, originate.]

As this is the first word under *con-*, some remarks will be made upon the pronunciation of the words in which it occurs; these being, mainly, to the effect that, though two *ns* are written, only one is sounded; in other words, the doubling of the consonant is a doubling to the eye only, not to the ear. Yet, over and above its value in etymology, as showing the structure of the word, it has also an import in orthography.

The vowel which precedes it is always short. In most words this is the case in English; and that to such a degree that, with a few exceptions, no consonant doubled in writing is really doubled in pronunciation. It merely shows the quantity of the vowel; and, so doing, it is only an orthographical expedient.

In one series of words, however, it is doubled; viz. in those compounds wherein the first element ends with the letter with which the second begins; as in *sculpture-town*, and others. In *book-case* the same takes place, only that the spelling slightly conceals the doubling. Sound for sound, however, the *k* and the *c* are the same.

The same is the case, as far as the elements go, with the words now coming under notice. There are two *ns*; one at the end of *con*, and one at the beginning of the word it precedes. But the combination being of Latin rather than of English origin, the English rule is not adhered to; and for this reason the preceding remarks have been made.

This applies to the other combinations, viz. *col-l*, *cōm-m*, and *car-r*. The *o* is short, and the doubling of the consonant which follows shows it to be so; yet there are really two *ls*, two *ms*, and two *rs*, just as there are two *hs* in *book-case*.

Another rule applies to the accent. Taken by itself, *con-* is a subordinate part of the word to which it belongs, and, as such, is naturally a syllable unlikely to be accented. But three facts traverse this view.

1. It is the practice in English, in many

cases, to throw the accent as far back (i.e. towards the beginning of the word) as is compatible with pronunciation; a fact which gives us such forms as *cōngregate*, *cōnfluence*, and the like; and this practice appears to have been Latin as well as English.

2. It is the practice of the English language to distinguish certain words consisting of the same elementary sounds, but with a difference of meaning, by changing the accent from one syllable to another. A whole class of verbs and nouns are thus distinguished; e.g. 'Take a *survey*,' and 'Survey the district.'

3. The third case where the *con-* is accented is in the important class of words to which there is a series of opposite or contrasted terms, as *comparate*, *disparate*, and others. Here the *con-*, from its distinctive character, is naturally accented. Subject, however, to the limitations thus suggested, *con-* is unaccented.

Now the rule respecting the English *co-* (see, especially, the remarks under *Contemporary*) by no means runs parallel with that for the Latin *con-*, and this want of parallelism is important in our orthoëpy. *Co-*, preceding a word beginning with a consonant, which, according to rule, must be an English word (*conate*), always has an accent of some kind, the character of which is remarkable. No one pronounces *conate* either as *cōmate*, with one only accent, and that on the first syllable, or as *comate*, with only one accent, and that on the second syllable; but rather as a word with two accents: *cō-mate*. That the two accents are equal is by no means asserted. The preceding, however, is the only way in which the double accentuation can be shown; inasmuch as our language has only one accentual mark. Yet, that in words compounded with *co-* there is a second or secondary accent is beyond doubt. That *co-mate* is exactly accented neither as *compact* nor as *campact* is a matter of which anyone may satisfy himself.

As a general fact this is important; for words with secondary accents form a peculiar class in English. But beyond this it has a special bearing on certain doubtful words; i.e. words wherein the second element is Latin, but the first the English *co-*; the rule being that if the word be an English compound made out of Latin elements the *co-* should be accented, at least, more strongly than if it represented the *con-* of the Latin compounds. Two facts lead us towards the reason of this.

1. The English *co-*, as compared with the Latin *con-*, is a long syllable. Add an *n*, and its sound is that of *con-*.

2. The English *co-* denotes conjunction much more generally, and much more decidedly, than the Latin *con-*.

Hence, the notion of *union* (with ship, so to say) is different in English and Latin.

There are two relations which give it: one between a pair of objects, the other between more than a pair. When A wishes B joy of anything, there is joy on both sides, and this community of joy makes two sorts of words possible. If we look to the person who wishes joy either wholly or nearly exclusively, it is a case of simple *gratulation*; whereas, if we look at the person who receives the same equally with the person who gives it, it is a case of *con-gratulation*.

Vol. I.

Both rejoice together. Here the idea suggested by *cum* resides in the reciprocity; and this may exist when the persons concerned are only two in number. But what if two persons wish joy to a third? In this case a second sign of community is wanted, viz. one to express the *joint* act of *gratulation*; a fact which gives not only the joy on the part of the person who receives the demonstration, but, also, that which is shared by the several individuals who join in making it.

Now few languages tolerate to any great extent the accumulation of signs of community which this involves. On the contrary; our language uses *cum*, *con*, or *co* (or whatever the sign may be) in one sense, to the comparative exclusion of it in the other, while the Latin language reverses the practice. If so, the English *co-* and the Latin *co-* (*-cum*) are really, logically, though not historically, words of different languages.

In evidence of this let us look at the two series of compounds. Words like *contamin* and *contaminate*, wherein the original relation between two objects is so far lost as to give no palpable distinction between the simple form and the compound, are common in Latin, rare in English. On the other hand, such words as would be equivalent to *co-tracter* are comparatively rare in Latin; yet if any language wanted them it is the Latin. An Englishman almost wonders how with more than one consul, more than one praetor, more than one imperial chief magistrate, the Romans did without such words as *con-consul*, *cum-praetor*, *co-imperator*. The fact, however, is that the words *co-* and *con-* mean different kinds of community in the different languages. In the Latin the prefix means *reciprocity* between two objects simply; in the English *joint* action on the part of two, or more than two, towards a third.

See *Córespondent* and *Correspondent*.]

1. Common birth; production at the same time; community of birth: (*con* denoting *actual* or *approximate* equality in the way of time).

Christians have baptized these genuine births and double *conatus* as containing in them a distinction of soul.—*Sir T. Browne, Vulgar Errors*.

2. Act of uniting or growing together: (*con* denoting *physical union*; in which case *nascor* = grow, rather than originate).

Symphysis denotes a *conjunction*, or growing together.—*William, Surgery*.

Connato. *adj.* [Lat. *natus*, part. of *nascor*.]

1. Born with another; innate.

Many, who deny all *connate* notions in the speculative intellect, do yet admit them in this.—*South*.
Their dispositions to be reflected some at a greater, and others at a less thickness of thin plates or bubbles, are *connate* with the rays, and immutable.—*Sir I. Newton, Opticks*.

2. In *Botany* and *Zoology*. Joined together at the base as in certain leaves; grown together.

Connatural. *adj.* Connected by nature; innate; participant of the same nature.

First, in man's mind we find an appetite To learn and know the truth of every thing, Which is *connatural*, and born with it.

Such is the *connaturalness* of our corruptions, except we looked for an account hereafter.—*Bishop Pearson, Exposition of the Creed*, art. vii.

Connature. *s.* Likeness in respect to nature; identity, or similarity, of character.

We have seen that the higher orders of relations are severally resolvable into relations of Likeness and Unlikeness, whose terms have certain specialities and complexities. Similarity, was defined as the continuation of two *connatural* relations between states of consciousness which are themselves like in kind but commonly unlike in degree. Contension we found to be, likeness in degree between either changes in consciousness that are like in kind, or states of consciousness that are like in kind. It was shown that Contension is the likeness of two composite states of consciousness, in respect of the number and order of the elementary relations of coexistence which they severally include. Coexistence was resolved into two species, whose terms are exactly alike in kind and degree, exactly unlike, or opposite, in their order of succession, and exactly alike in the feeling which accompanies that succession. *Connature* was defined as likeness in kind between either two changes in consciousness, or two states of consciousness.—*Herbert Spencer, Elements of Psychology*, § 96.

Connéct. *v. a.* [Lat. *connecto*.] Join; link; unite; conjoin; fasten together.

The conjuncture that constitute the epideictive, will be so *connécted* to one another, that, instead of a fluid body, they will appear in the form of a red powder.—*Boyle*.

Connécting. *part. adj.* Joining; linking; fastening together.

The natural order of the *connecting* ideas must direct the syllogisms, and a man must see the connection of each intermediate idea with those that it *connects*, before he can use it in a syllogism.—*Locke*.

Connection. *s.* [The difference between words like *connection* and *connexive*—words derived from the same base, giving almost identical forms, and with sometimes identical, and always allied, meanings—is by no means a mere point of spelling; nor is the question to be taken up on orthographical principles only. The first point to note is the fact of the *t* being no part of the original root; but an extraneous element which, in both Greek and Latin was inserted between the root and some of the inflections when the former ended in *k* or *p*; viz. *κτενω* (*κτενω*); *πλεκω* (*πλεκω*); *επιπλεω* (*επιπλεω*). When an *g* followed (as well as in certain other cases), this *t* was ejected. Hence, the passive participles of *plecto*, *necto*, *flecto*, &c., were *plexus*, *nexus*, *flexus*, &c. This gives two bases for the development of derivative forms; one in *x*, and one in *ct*. It is probable that originally each of these bases had its proper and peculiar series of derivatives: the former consisting of words in *-us*, like *plexus*, *nexus*, and *flexus*; the latter of words like *plectio*, *nectio*, and *flectio*. And between them a difference of sense is discernible; the forms in *-us* giving the result of an action rather than the action itself, the forms in *-tio* the action rather than the result. But that these might easily be confused is manifest. And the same chance of confusion is equally mah-

In joys of conquest he resigns his breath,
And, fill'd with England's glory, smiles in death.
Addison.

3. Acquisition by victory; thing gained.

More willingly I mention hell,
Than this our old conquest; than remem'ber hell,
Our late habitation. *Milton, Paradise Lost, l. 45.*

The conquests of which we read in the history of nations are of three kinds. . . . Finally, there is that kind of subjugation of one people or country by another which results simply in the overthrow of the independence of the former, and the substitution in it or over it of a foreign for a native government. This is generally the only kind of conquest which attends upon the wars of civilized nations with one another. . . . In taking the style of the Conqueror with respect to Richard, as he had been wont to take that of the Bastard with reference to his vassal Normandy, William, as has been often explained, probably meant nothing more than that he had acquired his English sovereignty for himself, by the nomination or bequest of his relation, king Edward, or in whatever other way, and had not succeeded to it under the ordinary rule of descent. Such a right of property is still, in the old feudal language, technically described in the law of Scotland as acquired by conquest, and in that of England by purchase, which is etymologically of the same meaning, the one word being the Latin conquestus, or conquestation, the other perquisitio. — *Cruik, History of English Literature, i. 42-43.*

4. In Law. Purchase. See preceding extract.

What we call purchase, the feudists call conquest; both denoting any means of acquiring an estate out of the common course of inheritance. — *Sir W. Blackstone.*

Matter hath no life nor perception, and is not
conscious of its own existence. — *Bentley, Sermons.*

Among substances some are thinking or con-
scious beings, or have a power of thought. — *Watts,*
Logic.

What I am conscious of when I see the colour blue,
is a feeling of blue colour, which is one thing; the
picture on my retina, or the phenomenon of hitherto
mysterious nature which takes place in my optic
nervous or in my brain, is another thing, of which I
am not at all conscious, and which scientific in-
vestigation alone could have apprised me of. These
are states of my body; but the sensation of blue,
which is the consequence of these states of body, is
and a state of body; that which perceives and is
conscious is called mind. . . . When a stone lies be-
fore me, I am conscious of certain sensations which
I receive from it; but when I say that these sensa-
tions come to me from an external object which I
perceive, the meaning of these words is, that receiv-
ing the sensations, I intuitively believe that an ex-
ternal cause of those sensations exists. — *J. S. Mill,*
System of Logic.

own actions.

If these perceptions, with their consciousness, al-
ways remained in the mind, the same think-
ing would be always consciously present. — *Locke.*

Conscientiousness. *s.* Attribute suggested by
Conscientious.

1. Feeling, cognizance, or perception of what passes in a man's own mind.

If spirit be without thinking, I have no idea of
anything left; therefore conscientiousness must be its
essential attribute. — *Watts, Logic.*

The postulates and axioms prefacing our Ex-
positions of exact science—our works on geometry and
our mechanical treatises—are received on the direct

WARRANT of consciousness that they are indisputable, . . . but when from objective truths we pass to subjective ones . . . when, after analysing knowledge, we begin to analyse that which knows, we are not by the question—What is here our test of validity? *Consciousness* vouches for the truth of propositions concerning external relations; but what shall vouch for the truth of propositions concerning those internal relations which constitute the phenomena of consciousness? To reply broadly that *consciousness* must be its own surely, involves the awkward corollary that all conclusions reached by self-analysis are true; seeing that in the individual who draws them, all such conclusions are dicta of *consciousness*. This corollary is manifestly inadmissible. . . . In the one case, as in the other, some method of verifying our empirical conclusions must be found, before any safe results can be reached. True, we cannot transcend *consciousness*; but we can proceed in the ascertainment of internal truths, as we can make a particular mode of perception the guarantee of all other modes. And this is obviously what we must do. Some canon of normal thinking must be found, by their equality or inequality with which all conclusions respecting the phenomena of consciousness may be judged. — *Herbert Spencer, Data of Biology*, p. 1, ch. i, § 1.

- Likewise and unlike, therefore, as well as independent, sequence, and simultaneity, must stand apart among relations, as things not generic. They are attributes grounded on facts, that is, on states of consciousness, but on states which are peculiar, irremovable, and inextinguishable. . . . Qualities, like substances, are known to us no otherwise than by the sensations or other states of consciousness which they excite; and while, in compliance with common usage, we have continued to speak of them as a distinct class of things we showed that in predicating them no one means to predilect any thing but those sensations or states of consciousness, on which they may be said to be grounded. . . . Quantity is also manifestly grounded on something in our sensations or states of feeling, since there is an indubitable difference in the sensations excited by a larger and a smaller bulk, or by a greater or a less degree of intensity, in any object of sense or of *consciousness*. . . . As the result, therefore, of our analysis, we obtain the following as an enumeration and classification of all nameable things:—1st. Feelings, or states of consciousness. 2nd. The minds which experience those feelings. 3rd. The bodies, or external objects, which excite certain of those feelings, together with the powers or properties whereby they excite them. . . . For distinction's sake, every fact which is solely composed of feelings or states of consciousness considered as such, is often called a psychological or subjective fact; while every fact which is composed, either wholly or in part, of something different from those, that is, of substances and attributes, is called an objective fact.—*J. S. Mill, System of Logic*.
2. **Internal sense of guilt or conscience.**

No man doubts of a Supreme Being, until, from the consciousness of his provocations, it becomes his interest there should be none.—*Dr. H. More, General account of the Temple*.

Such ideas, no doubt, they would have had, had not their consciousness to themselves, of their ignorance of them, kept them from so idle an attempt.—*Locke*.

An honest mind is not in the power of a dishonest: to break its peace, there must be some guilt *within*.—*Pope*.

He *conscripted* and prepared a new post with all the study and industry that he could practise, &c. *Ibid.* (Rich.).

Conscript. adj. (accent in extract on the last syllable.) [Lat. *conscriptus*, part. of *conscribo*, from *scribo* = write.] Term applied to the Roman senators (Patres conscripti), from their names being written in the register of the senate: (*senatus* postpositive in the extract, being a mere Latinism from *Patres Conscripti*).

In 1798 General Jourdan presented to the Council of Five Hundred a project of a law for a new mode of recruitment, under the name of *conscription*. This project was approved by the legislature, and passed into a law 5th of September, 1798. By this law every Frenchman, from the age of twenty to twenty-five, was declared liable to be called out to serve in the regular army. . . . The first levy by *conscription*, in 1793, was 200,000 men. By an arrêté 19 Vendémiaire, year xii. (12 October, 1803), severe penalties were enacted against *refractory conscripts*, that is, those who had not joined their regiments.—*National Cyclopaedia of Useful Knowledge*.

Another mode in which the associative tendency operates, is in the formation of separate conceptions of things that have never been brought before consciousness by sensory impressions. The *constructive* which has been termed that of *construction*, is the foundation of imagination; and it is exercised in every other mental operation in which we pass from the known to the unknown. When we attempt to form a conception, which shall differ from one that we have already experienced as a matter of objective reality, by the introduction of a single new element—as when we imagine a brick built up by one of stone, in every respect similar as to size and form, we substitute in our minds the idea of stone for that of brick, and associate it by the principle of continuity with those other ideas, of which that of the whole building is an aggregate.—*Dr. Carpenter*, *Principles of Human Physiology*, § 560.

However, when pressed, he said, that, though up to that day he had not permitted himself to discuss the nature of Christ, or to affirm that "God's body is man's body though it was human," yet he would allow, if commanded, our Lord's consubstantiality with us.—*Neuman*, *Essay on the Development of Christian Doctrine*, ch. v. sect. 3.

In the year 1524 there arose among the friends of the Reformation a tedious and fatal contest respecting the presence of the body and blood of Christ in the Eucharist. Luther had rejected the doctrine of *transubstantiation*, but maintained, nevertheless, that along with the elements of bread and wine the real body and blood of Christ was received by the partakers of the Lord's Supper. . . . He could allow the scriptural expressions to be consistent with the reality of the elements according to the plain testimony of our senses, and yet . . . think that those same expressions do still imply that the partaker of the real bread and wine does also partake at the same time of the material substance of Christ's human body. Of the same age.

A grove born with himself he sees,
And loves his old contemporary trees. Cowley.

[That the history of the *n* in this word, and the principles on which *contemporary* is in a fair way of excluding its rival *cotemporary* from the English language, are of some importance may be seen from the following extracts. In the previous editions they stand under *Cotemporary*; but, as the whole question is best dealt with under a single entry, they are,

in the present, removed to the word which comes first in order. Cogenial, as contrasted with Congenial, has already been given.

COTEMPORARY. adj. *con* and *tempus*, Lat. Bentley has remarked that *cotemporary* is a downright barbarism. 'For the Latins never use *co* for *con*, except before a vowel, as *cognatus*, *coterminatus*; but before a consonant, they either retain the *n*, as *cotemporary*, *cotitulum*, or melt it into another letter, as, *collection*, *comprehension*; so that the word *cotemporary* is a word of his [Bentley's] own *composition*, for which the learned word will *cogratulate* him!' (Dissertation on Plinarius, preface.)

Such is the notice of Dr. Johnson. His editor writes as follows:

'It will not be easy to confute the reasoning of this remark, by which the just rule of formation to our compound words of this class is given; though many indeed affectively write *cognatus*, *cotemporary*, and the like, as well as *cotemporary*. Spent might have been added by Dr. Johnson to Locke in aid of *cotemporary*; and in modern times, both the Wartons have adopted this spelling. Yet Locke, and Cowley, and Dryden, and Addison, are Johnson's examples for *cotemporary*; and Chillingworth and Steele will be found on the same side.' (Todd, in *note*.)

As far, then, as authority goes, the case in favour of the form in *n* is made out to the satisfaction of most readers; to which it may be added that it has certainly increased since the foregoing remarks of Johnson and his editor were written. Perhaps it has increased ever since the time of Bentley, inasmuch as it is Bentley whom Johnson quotes. At any rate, the only living writer with any pretensions to authority in whom I have found the form in *o* is Mr. Mill (see *Cotemporary*).

Whether *cotemporary* be a worse word than *contemporary* is one question; whether Bentley's argument be valid is another; nor are those who criticize it to be charged with undue presumption. The doctrine that nothing is weaker than its weakest point is as good in criticism as in mechanics; and it must be remembered (1) that the word in question is *English* rather than Latin, and (2) that the author of the Dissertation on Plinarius was also the emendator of Milton; his authority in the two cases being by no means equal.

That 'the Latins never use *co* for *con*, except before a vowel, &c.' is true; but it is wholly irrelevant. If, with the Latin word *contemporarius* before him, the first person who wrote *cotemporary* had ejected the *n*, he would have been wrong. He would also have been wrong if, under the notion of putting a Latin word into an English form, he had supposed that that word was *cotemporarius*. But neither of these alternatives is the fact. The element *-temporarius* is an English word, and in its English form it has a certain Latin element prefixed to it. In short, it is a word made up in England; and, in the first instance at least, out of English elements and on English principles. What these are is evident in such words as *comate*, a word which no one ever said should be *con-mate*. Unlike *mate*, however, *temporary* is a word of Latin origin; and it is not denied that this complicates the matter, by making the resulting compound look like a word introduced *ready-made* from the Latin. Now this Bentley has either not seen, or, seeing, has assumed something which he ought to have proved, viz. the doctrine that words, though put together in England, and, as such, made out of English elements are, when the latter element is of Latin origin, to

be treated as if they were wholly Latin, i.e. Latin words adopted into English. But this would have allowed a good deal to be said on the other side. In *co-heiress*, for instance, we leave the domain of pure English, and find *co-* with a Norman affix; in *co-partener* we get a Low Latin one; and in *co-religionist* we get nearly as much Latin as in *cotemporary*. In fact, the question is one which even now it is difficult to reduce to rule. Be this, however, as it may, it is clear that the foregoing rule falls short of the case; and so do the suggested analogues.

a) *Constitution*.—Here the omission of the *n* would be inaccurate but, only because there is no such word as *stitution* in English.

b) *Collection* is in a somewhat different predicament. With the two *s* it is simply the Latin *collectio* in an English form. But there is such a word in English as *lection*, though a scarce one; and there may be (perhaps is) such a word as *co-lection* = *joint reading*.

c) Again, *comprehension* is from the Latin *comprehensio* treated as a whole word. *Co-prehension* (*prehension* being an English word) is liable to be coined at any time if wanted, i.e. it is a word *in posse*, meaning *joint seizure*.

d) *Coposition* is certainly a telling word; and, with the one which follows it, is meant to convey an objection on the principle of the *reductio ad absurdum*. But all it really means is, that, if we start with the Latin word *composition*, we are not free to eject the *n*. *Position*, however, is English, and *co-position* is a possible, though an unlikely, word; its unlikelihood depending upon circumstances other than etymological.

e) *Cogratulate* is simply the Latin *cogratulari*; but, if *gratulate* were a common English word, *co-gratulation* would be a useful term for a *joint* address of gratulation.

The extract from Cowley is remarkable. It is one of the best lines he has written; one of the best lines of his original (for it belongs to a translation); and one of the best lines in the whole range of translations in general. Yet it neither means *contemporary* in the ordinary sense of the term; nor was written under the ordinary influences of an English writer. The original, from Claudian's Old Man of Verona, is

'Æquæ æque videt consensisse nemus'

as applied to the trees of the old man's planting, i.e. to trees of his own age, in the sense of *as old as himself*; rather than to trees (old or young) of the same generations. Yet, *æquæ æque* is not the word which is exclusively translated. The beauty of the line is got from *consensisse*; and it is this which (probably), rather than *æquæ æque*, suggested the *n*. In short, the word *cotemporary* here translates two words; neither exclusively, both adequately.

Upon these distinctions, then, we may ground the following statement; viz. that if *lection*, *prehension*, *position*, and *gratulate*, were words as common as *temporarius*, and at the same time as liable to be required in union with *con*, they would give compounds like *cotemporary*, and that concurrently with the existing forms derived

directly from the Latin. Hence, the question is, not whether one out of two words is *right to the exclusion of the other*, but whether *both* are *not right*; and, if so, under what conditions.

That the form in *o* (*co-temporary*) is thus far justifiable is beyond doubt:

1) It is justifiable if treated as a compound made by a prefix to the English word *temporary*.

2) It is justifiable if a certain amount of early usage on the part of good writers make it so. That Boyle used it is plain on the very face of the question; and that before Bentley objected to it. Sprat, too, a good writer of prose, though an indifferent poet, used it. The Warton, though their instincts as to what was English and what not were at least as good as either Bentley's or Johnson's, are scarcely evidence. As scholars, they would be in favour of the form in *a*; but they were not only Oxford men, but Oxford men writing at a time when a sort of academical guerilla was going on between the two universities, of which the Triumph of Isis by Joseph Warton (on one side), and the reply to it by Mason (on the other), are records.

3) It is justifiable so far as the rule that 'Words made out of Latin elements, but put together in England, are to be treated as direct introductions from the Latin,' has not yet been established; for it is only by the establishment of a rule like this that *contemporary* can be condemned.

Contemporary, on the other hand, is justifiable:

1) So far as authority, like a prophecy fulfilling its own accomplishment, is an effective philological influence; and this is saying much.

2) So far as the rule just alluded to has a presumption in its favour.

3) So far as the etymological fiction that, when a word made out of English elements takes the general form of a word derived from the Latin, the existence of a Latin original may be presumed. This fiction is, by no means, condemned; still it is but a fiction.

We may, then, say that there are *two concurrent forms*. Which is the better? The pure etymological view is certainly in favour of the form in *o*. The question, however, is only important under the notion that one must be preferred to the other. The editor would keep both; but for this to be done, a difference of import must be found.

a. In its current sense *contemporary* is likely to keep its place. If so,

b. *Contemporary* may be advantageously made over to the phraseology of metaphysics. Few will deny that as an approximate synonym for *coeternal* it is the better word; indeed *time* (*tempus*) is just the idea for which we want as many words expressive of *coexistence* in it as can be got. Hence it is, perhaps, safer to say that the tendency of language is to put *contemporary* in the same class with *coexistence*, *coetense*, and the like, than to say that, in the ordinary acceptation, it is a better word than *contemporary*.

*But still the original complication remains. The Latin use of *co-*, and the English, though in the main different, may, in certain cases, coincide. Now the peculiarity of the words in question is that

they do coincide. Element for element, *temporary* (treated as English) gives us exactly what *temporarius* would give us as a Latin word Anglicised; whilst, in point of import, *co-* English, gives us just what would be given by *co-* in the Latin *co-eternus*. The word is difficult; and it is submitted that, with this coincidence, it is no wonder that it should be so.

All that has hitherto been written applies to the element *co-*, as if it were in the recognition or non-recognition of the *a*, that the gist of the question lay. It is probable, however, that this is merely the gist which is strained at, and the latter element, to which few objections have been made, is the camel which is swallowed. In the opinion of the editor, to talk of *two co(au)temporaries* is much the same as to talk of *two extempore sermons*; a phrase which few critics would defend, though many of the uncritical use it. Sooner or later, however, it will find its way into the language. *Extempore*, to those who know Latin, is an adverb rather than an adjective; yet to preach a sermon *extempore* is pretty sure to come out in the slightly modified form of *preach an extempore sermon*. And hence may come the substantive, a preacher being said to give an *extempore*, just as an organist is said to give a *voluntary*.

In writing, however, there is this difficulty. The final *c*, by those who do not know its import, runs the risk of being treated as a mute, and some such word as *extempor* being the result; to avoid which recourse is had to *y*. For *extempore* to be sure of being sounded as a quadrisyllable, *extempore* is the only orthography. But this is repugnant to the scholar and critic; and he denures; the effect being that the character of the word remains unfixed, and its form varies accordingly. In *extempore* this is giving us such a barbarism as *extempore*; in *co(au)tempore* we have got it as a gift from our predecessors. If this be the correct view, the real elements of the compound are *con + tempore*, the word belonging to the same class as *ex-tempore* and *pro-tempore*.]

May, and likewise Must, and Can, (as well as Cannot), are each used in two senses, which are very often confounded together. They relate sometimes to Power, or Liberty, sometimes to *Contingency*.

When we say of one who has obtained a certain sum of money, 'now he may purchase the field he was wishing for,' we mean that it is in his Power; it is plain that he may, in the same sense, hoard up the money, or spend it on something else; though perhaps we are convinced, from our knowledge of his character and situation, that he will not. When again we say, 'it may rain to-morrow,' or 'the vessel may have arrived in port,' the expression does not at all relate to power, but merely to *contingency*; i.e. we mean, that though we are not sure such an event will happen or has happened, we are not sure of the reverse.—*Whately, Logic, app. i. Ambiguous Terms.*

The former have received the designation of *explosive*, and the latter of *continuans*. — *Dr. Carpenter, Principles of human Physiology*, § 341.

Contra. [Latin.] Against; opposite; (element in composition).

Like *con-*, this word has a notable list of compounds; though, comparatively, a short one.

Like *con-*, too, it must be treated as an element which is English as well as Latin; that is to say, it can, like *co-*, be placed before words with which there is no evidence of its union in Latin.

As an *English* element, however, it retains its form. — *Each* its form is *contre*; but this it soon loses in English; sometimes in a manner which entirely disguises its origin. This is the case in *country-dance*, of which the real first element is *contre*, giving a dance in which the partners stand opposite. When it preserves it, as in *contritump*, the word can scarcely be considered English.

The form, other than that which it has in Latin, is *Counter*: the words which give it being Anglo-Norman, as opposed to Latin on the one side and modern French on the other.

Contra is also the full form of *con* in 'pro and con;' in which case it must be treated as a separate word rather than as the element of a compound.

Contraband. *adj.* [Italian, *contrabando* = contrary to proclamation.] Prohibited; illegal; unlawful.

If there happen to be found inexpressive expression, or a thought too want on, in the *conceit*, let them be stayed or corrected like *contraband* goods. — *Dryden, Fables*, preface.

When two nations are at war, or, if there is any foreign article or articles necessary for the defence or subsistence of either of them, and without which it would be difficult for it to carry on the contest, the other may legitimately exert every means in its power to prevent its opponent from being supplied with such article or articles. All writers of authority on international law admit this principle; and lay it down that a nation which should furnish a belligerent with articles *contraband* of war—that is, with supplies of warlike stores or any article required for the prosecution of the war—would forfeit her neutral character, and that the other belligerent would be warranted in preventing such succours from being sent and confiscating them as lawful prize. — *McCulloch, Commercial Dictionary*.

Contraband. *s.* Illegal or prohibited traffic.

All true patriots are friends to religion;

All great statesmen are true patriots;

All great statesmen are friends to religion;

for as this conclusion is the *contradict* of the original minor Premise, it must be false, since the Premises are always supposed to be granted; therefore one of the Premises by which it has been correctly proved must be false also; but the minor Premise being one of those originally granted is True; therefore the Falsity must be in the minor Premise; which is the *contradict* of the original Conclusion; therefore the original Conclusion must be True. This is the indirect method of reasoning. *Whately, Elements of Logic, li. ch. iii. § 7.*

Subject. Copula. Predicate.
Some-not-heroes are men.

K (which indicates the reduction ad impossibile) is a sign that the proposition, denoted by the vowel immediately before it, must be left out, and the contradictory of the conclusion substituted; viz for the minor premise in Baroko and the major in Bokardo. But it has been already shown that the conversion by 'contraposition,' [i.e. 'negation'] will enable us to reduce these two moods, extensively. — *Whately, Elements of Logic*, b. ii. ch. iii. § 7.

2. In Logic. In the great majority of logical treatises, the meaning of the words

contrary and contradictory, as applied to the relation in which certain propositions stand to one another in the way of Opposition is as follows:—

1. The two Universals, i. e. the Universal Affirmative and the Universal Negative, are contraries; as,

Every x is y, opposed to No x is y.

2. The Universal Affirmative and the Particular Negative are contradictories; as,

Every x is y, opposed to Some x is not y.

The same is the case with the Universal Negative and the Particular Affirmative.

No x is y, opposed to Some x is y. This division is both natural and important, as may be seen in the first and second extracts. That a change of name has been proposed may be seen in the third.

Two propositions are said to be Opposed to each other, when, having the same Subject and Predicate, they differ in Quantity, or Quality, or Both. It is evident, that with any given Subject and predicate, you may state four distinct propositions, viz. A, E, I, and O; any two of which are said to be Opposed; hence there are four different kinds of opposition, viz. 1st, the two universals (A and E) are called *contraries* to each other; 2nd, the two particular, (I and O) subcontraries; 3rd, A and I, or E and O, subalterns; 4th, A and O, or E and I, *contradictories*. . . . Hence it will be evident, that *contraries* will be both false in Contradictory manner, but never both true; subcontraries, both true in Contradictory manner, but never both false; *contradictories* always one true and the other false. — *Whately, Elements of Logic*, b. ii. ch. ii. § 3.

It is to be observed, that the most perfect opposition between terms exists between any two which differ only in respect to quality and having the particle Not (either expressly, or in sense) attached to them; as, 'organized,' and 'not-organized'; 'corporeal,' and 'incorporeal.' For not only is it impossible for both these terms to be taken at once at the same time, but also, it is impossible but that One or Other should be applicable to every object; as there is nothing that can be both, so there is nothing that can be Neither; and things that can be even conceived, must be either 'Cessant,' or 'Endless,' either 'corporeal,' or 'incorporeal.' And in this way a complete twofold division may be made of any subject, hence certain as the expression is to Exhaust it. And the repetition of this process, such as to carry on a subdivision as far as there is occasion, is thence called by logicians 'absorption infinity'; i. e. the repeated cutting off of that which the object to be examined is Not; e. g. '1. This disorder either is, or is not, a dropsy; and for this or that reason, it is Not; 2. Any other disease either is, or is not, gonorrhea; this is not; then, 3. It either is, or is not, consumption, &c.' This procedure is very common in Aristotle's works. Such terms may be said to be *contradictory* opposition toward each other. On the other hand, *contrary* terms, i. e. those which, coming under some one class, are the most different of all that is known to that class, as 'wise' and 'foolish' both denoting mental habits, are opposed, but in a different manner; for though both cannot be applied to the same object, there may be other objects to which Neither can be applied; nothing can be at once both 'wise' and 'foolish'; but a stone can not be either. *Ibid.*, supplement to ch. i. (in Logic) § 2.

The words All and None are signs of Total quantity, and make the propositions Universal, as, 'All Xs are Ys,' 'No Xs are Ys.' Two *contrary* (usually called *contradictory*) propositions of the last are 'Some Xs are not Ys,' and 'Some Xs are Ys.' The *contrary* usually *contradictory* forces of the particles are seen in 'Either all Xs are Ys, or some Xs are Ys; not both;' and in 'Either no Xs are Ys, or some Xs are Ys; not both.' . . . *Contrary* propositions are a pair of which one must be true and one false; as, 'he did,' 'he did not'; or a, 'Every X is Y,' 'Some Xs are not Ys.' *Contraries* contradict one another; but so do other propositions. Thus 'All men are strong' and 'All men are weak' contradict one another to the utmost: The second says there is not a particle of truth in the first. But the *contrary* merely says there is more or less falsehood; for 'All men are strong' the *contrary* is 'There are men or men who are not strong.' (Hence the usual nomenclature of Logic, what I call the *contrary* is called the *contradictory*, as it were the only one. In common language, when two persons disagree, we say they are on *contrary* sides of the question; in the usual technical language of Logic, one would mean that if one should say all men are strong the other says no man is strong. But in common language, the one who maintains the *contrary* is the who advances anything which the other is opposed to.) Every proposition has its *contrary*; there is no assertion but has its denial; no denial but has its assertion. Every logical scheme of propositions must contain a denial for every assertion, and an assertion for every denial. *The Elements of a proposed System of Logic*, §§ 15, 14, 1-3, 116.

Contrary. v. a. Oppose; thwart; contradict. *Obsolete*.

Longinus says, that Cecilius wrote of the Sublime in a low way; on the contrary Mr. Pope calls Longinus 'the great sublime he drew.' Let it be my ambition to imitate Longinus in style and sentiment; and, like Cecilius, to make these appear a contrast to my subject; to write fitly and with beauty; and by a finished piece to come for an ill-timed person. — *Idem, Essay on Criticism*, p. 3.

We should consider in each case what question it is that is proposed, and what answer to it would, in the instance before us, be the most opposite or contrasted to the one to be examined; e.g. 'You will find this doctrine in Bacon, may be contradicted, either with, 'You will find in Bacon a different doctrine,' or with, 'You will find this doctrine in a different author.' — *Whately, Elements of Logic*, b. ii, ch. iv, § 1.

In introducing the mention of language previously to the definition of logic, I have departed from established practice, in order that it may be clearly understood, that logic is entirely *conversant* about language. • By many windings to their clever elench;

Thus, if two sides of a triangle be equal, the angles opposite to those sides, are also equal: the *converse* of the proposition is, that if two angles of a triangle be equal, the sides opposite to those angles are also equal. *Chambliss.*

4. In *Logic*. Transposition of the terms of a proposition.

If . . . we are not, of course, allowed to introduce a new term of proposition, without adding something to the truth of the proposition; but these premises allowed to be true.

accepted themselves as truth of any proposition implies that of its relative *converse* or transposed; by taking advantage of this liberty, where there is need, we deduce (in figure 1st) from the premises originally even, either the very same conclusion as the original one, or another from which the original conclusion follows by *relative*.

All wits are decreed:
All wits are annulled;
Some who are annulled are decreed.

is reduced into truth, by converting 'by limitation the minor premises.

2. In Logic. Process by which the converse of a proposition is obtained.

A proposition is said to be converted when its terms are transposed; i.e. when the subject is made the predicate, and the predicate the subject. When nothing more is done, this is called simple conversion. No *cavet enim* is employed for any logical purpose, unless it be illative; i.e. when the truth of the converse is implied by the truth of the exposita (or proposition given).—*Whately, Elements of Logic*, h. ii. ch. n. § 4.

He once intended to have made a better reparation for the folly or injustice with which he might be charged, by writing another poem entitled 'The Progress of a Froth-blower,' wherein he intended to lead through all the stages of vice and folly, to convert him from virtue to wickedness, and from religion to infidelity, by all the foolish sophistry used for that purpose.—*Johnson, Life of Savage*, (Oud MS.).

The papists cannot abide this proposition converted; all sin is a transgression of the law; but every transgression of the law is sin. 3. Capable of being logically converted.

Thus, if I say of one number, suppose 100, that it is the square of another, as 10, then, this is understood by every one, from his knowledge of the nature of numbers, to imply, what are, in reality, the two propositions, that 100 is the square of 10, and also that 'the square of 10 is 100.' So also, if I say that 'Romulus was the first king of Rome,' this implies, from the peculiar signification of the words, that 'the first king of Rome was Romulus.' Topics thus related to each other are called in technical language, *convertible* (or equivalent) terms. But then, you are to observe that when you not only affirm one term of another, but also affirm (or imply) that these are 'convertible' terms, you are making not merely one assertion, but two.—*Whately, Elements of Logic*, b. i. § 5.

Convex. *adj.* [Lat. *convexus*. In the opinion of the editor, founded as much upon his observation as to the way in which the word is actually sounded, as upon any theoretical doctrine as to the propriety of any particular pronunciation, this is one of the compounds to which the remarks upon the difference between the English *con-* and the Latin *con-*, in respect to accent, are, with a modification, applicable.

It is submitted that the accent, in the words under notice, is nearly the same on each syllable, i.e. that it gives *con-vex*, rather than either *convex* or *con-vex*, though each of these may be heard. The same applies to *concave*, which is held to be *con-cave* rather than *convex* or *con-cave*. This is because the words are to be treated as opposites or contrasts to each

other, a fact which, as the initial syllable is the same in each, throws the distinctive emphasis upon the second.

Meanwhile, each appears as a different part of speech, there being, over and above the ordinary adjectival forms, both a verb and substantive *convex*, and (if not the actual verb) the verbal forms *convexed* and *convexedly*. Now, as in ordinary words, the function of the accent is to distinguish combinations of syllables otherwise identical when constituting different Parts of Speech, a conflict between two rules is exhibited in the pair of adjectives under notice.] Rising in a circular form: (opposed to *concave*).

It is the duty of a painter, even in this also, to imitate the *convex* mirror, and to place nothing which places at the border of his picture.—*Dryden, Translation of Dufresnoy's Art of Painting*.

Newton, Opticks*. If the eye were so convex as to destroy even space, and little objects a hundred leagues off, it would do us little service; it would be terminating by unobscuring hills and woods, or in the largest and most plain, by the very convexity of the earth.—*Bentley*.

Convexly. *adv.* In a convex form.

Almost all, both blunt and sharp, are convexly coned; they are all about convex, not only by annulation, but between both ends.—*Graaf, Muscum*.

A very moderate degree of attention, however, to what is passing in the mind, will enable any one to perceive the difference. A blind man may be fully convinced that a soldier's coat is of a different colour from a coal; and thus his conviction is not more distinct from a perception of the colours, than a belief that some one is very much to be pitied, from a feeling of pity for him.—*Whately, Elements of Rhetoric, pt. ii. ch. i. § 2.*

of the glory of thy name over all the nations of
the earth.—*Bishop Hall, Great Mystery of Godli-

Other things done in the lord's court, as he registers such tenants as are admitted in the court, to any parcel of land or tenement belonging to the manor; and the transcript of this is called the court roll, the copy of which the tenant takes from him, and keeps as his only evidence. This is called a *lease* being, because it holds at the will of the lord; yet not simply, but according to the customs of the manor: so that if a copyholder break not the custom of the manor, and thereby forfeit his tenure, he cannot be turned out of the lord's pleasure. These customs of manors vary in one point or other, almost in every manor. Some *copy-holds* are feeble, and some certain: that which is feeble, the lord rates at what he or he may please, when the tenant is admitted into it; that which is certain is a kind of inheritance, and called in many places customary, because the tenant dying, and the hold being void, the next of blood paying the customary fine, as two shillings for an acre or so, cannot be denied his admission. Some copy holders have, by custom, the wood growing upon their own land, which they law they could not have. Some hold by the verge in ancient demesne; and though they hold by copy, yet are they, in account, a kind of freeholder: nor, if such a one commit felony, the king hath annum, dower, and yussum, as in case of freehold. Some others hold by common tenure, called mere *copy-hold*; and they committing felony, their land escheats to the lord of the manor. *Covent.*

If a customary tenant die, the widow shall have what the law calls her free bench in all his *copy-hold* lands. *Adisson.*

The light coquette of a sylphs alert repair,
And sport and flatter in the fields of air. *Pope*.

A coquette or a tender-lover are spark-led.—*Arbuthnot and Pope*.

Not less vain of her person than her politics, this stately coquet, the guardian of the protestant faith, the terror of the sea, the mediatrix of the factions of France, and the scourge of Spain, was infinitely mortified, if an embezzler, at the first audience, did not tell her she was the finest woman in Europe.—*T. Warburton, History of English Poetry*, iii. 133.

From answering she began to question: this
With her was rare; and Adeline, who as yet
Thought her pretensions went not much amiss,
Began to dread she'd throw to a coquette.

So very difficult, they say, it is
To keep extraneous from meeting, when once set
In motion. *Byron, Don Juan*, xv. 81.

[From *coquet*, a prattler. Dr Johnson says, which may be from *coquet*, to tattle. The old French is *coquet* for *coquet*. V. Leconte. One might suppose Coquette to have been filled by some *coquette*, and that, in revenge, he leaped upon the name the following choice terms: *Coquette*, a prattling or proud gossip; a flisking or flippant mix; a cocket or tallish housewife; a titillat; a scelerat-bit!

Among these appellations we see *coquet*: which was the English word at that time, and which is perhaps the meaning of Ben Jonson's slimmer the *fockete* in one of his Masques. Our old adjective *coquet* is pert, brisk, gay, &c., and was also at the beginning of the last century written *coquet*. A gentleman, a friend of mine, is always very *coquet* to her in his drink, and never so at other times; because fully is the effect of his kindness. (English Apollo, 1718, vol. i. p. 708.)—*Todd*.

I have been informed, that boats made of wicker, and covered with a skin, resembling the upper shell of a tortoise, are frequently used for passing rivers in different parts of India.—Boats of a similar structure are to be found in Wales, called *coracles*.—*Hole, Remarks on the Arabian Nights' Entertainments*, p. 92.

Córal, s. [Lat. *corallum*.]

1. Animal product forming the hard, or supporting, part of a large class of polypes, by the soft parts of which it is secreted; *polypedom*: (the extracts indicate the extent to which its animal or vegetable character has been a matter of doubt).

A red coral is a plant of as great hardness and stony nature, while growing in the water, as it has after long exposure to the air. The vulgar opinion, that coral is soft, while in the sea, proceeds from a soft and thin coat, of a crustaceous matter, covering it while it is growing, and which is taken off before it is picked up for use. The whole coral plant

grows to a foot or more in height, and is variously ramified. It is thickest at the stem, and its branches grow gradually smaller. It grows to stones, without a root, or without any penetrating them, but as it is found to grow, and take in its nourishment in the manner of plants, and to produce flowers and seeds, or at least a matter analogous to seeds, it properly belongs to the vegetable kingdom.—*Sir J. Hill, Materia Medica*.

This gentleman, desirous to find the nature of coral, caused a man to go down a hundred fathoms into the sea, with express orders to take notice whether it were hard or soft in the place where it grew.—*Sir T. Browne, Vulgar Errors*.

A turret was included
Within the wall, of alabaster white,
And crimson coral, for the queen of night.
Who takes in Sylvan sports her elate delight. *Dryden*.

Corall [is] a calcareous substance formed by a species of sea polypus. . . . The finest coral is found in the Mediterranean. It is fished for on the coasts of Provence, and constitutes a considerable branch of the trade of Marseilles. . . . Coral-fishing is nearly as dangerous as pearl-fishing, on account of the number of sharks which frequent the seas where it is carried on. . . . Coral is mostly of a fine red colour, but occasionally it is flesh-coloured, yellow, or white. The red is preferred for making necklaces, crosses, and other female ornaments.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Used adjectively, or as the first element in a compound.

He hears the crackling sound of coral woods,
And sees the secret source of subterranean floods. *Dryden, Virgil*.

From Greenland's icy mountains,
From India's coral strand,
Where Afric's sunny fountains
Roll down their golden sand;
From many a remote river,
From many a palmy plain;
They call us to deliver
Their land from error's chain. *Bishop Heber, Missionary Hymn*.

This resolution was . . . strengthened by intelligence that arrived in June that an American squadron had attacked a large body of Christians engaged in the coral-fishing off Iloilo, and had massacred or carried off into captivity the whole of the crews.—*Young, Naval History of Great Britain*, ii. 419.

The most important productions of the apparently insignificant race of Polyp are the accumulations of the calcareous skeletons of the Anthozoa, which form the coral islands and reefs. . . . These zoophyte productions are divided under three heads: 'atolls,' 'barrier reefs,' and 'fringing reefs.' The term 'atoll' is the name given to the coral-islands, or islets, in the Indian Ocean. An atoll consists of a wall or mound of coral rock, rising in the ocean from a considerable depth, and returning into itself so as to form a ring, with a lagoon, or sheet of still water, in the interior. . . . The coral animals thrive best in the surf occasioned by the breakers. Through this medium an ever-changing aerated body of sea-water washes over their surface, and their imperfect respiration is maintained at the highest state of activity. Abundant minuscules, and the like objects of food, are thus constantly brought within the sphere of the tentacula of the hungry polypes. . . . The third class of coral productions, which Mr. Darwin terms 'fringing reefs,' differ from the barrier reefs in having a comparatively small depth of water on the outer side, and a narrower and shallower lagoon enclosed between them and the main land. These differences in the characters of the wonderful fabrications of the coral animals are explicable by the following facts in their physiology. . . . The terms ascending and descending, of course, only here apply to the relation of the coral-builders to the unstable land, not to the level of the neighbouring sea. . . . Let the island go on subsiding, and the coral reef will continue growing up on its own foundation, whilst the water sinks on the land, until the highest point is covered, and there remains a perfect atoll.—*Ure, Lectures on Comparative Anatomy*, lect. vii.

2. Piece of coral which children have to help them in cutting their teeth.
Her infant granduncle's coral next it grew;
Thimble she ginkled, and the whistle blew. *Pope*.

Coralline, adj. Consisting of coral; having the character or nature of coral.

Coralline, s.

1. Polypedom of the corallines.

Coralline is a sea-plant used in medicine; but much inferior to the coral in hardness, sometimes greenish, sometimes yellowish, often reddish, and frequently white.—*Sir J. Hill*.

2. In Zoology. Polype of the same general character as the coral animal, but of less importance in commerce, in-

habiting northern and temperate, rather than tropical, latitudes.

The genera *Scrtularia*, *Campanularia*, *Tubularia*, &c., which form the principal subjects of Ellis's beautiful and classical work on *Corallines*, compose the present division of the compound Hydroids, or hydriform polypes. . . . It appears that sea-water may have entry to these canals and circulate with the chyle, and so contribute some share to the respiratory process of the *coralline*. It is certain that sea-water is admitted to the corresponding cavities in the Anthozoa. Both Lister and Lowen have observed an alternate imbibition and expulsion of water in the polypes of *Scrtularia* and *Tubularia*. The chyliferous fluid, as it may be termed, which circulates in the general ramified cavity of the *coralline* is colourless, and contains only some minute round corpuscles.—*Ure, Lectures on Comparative Anatomy*, lect. vii.

Coralloid, adj. [Gr. *κοραλλοειδης*.] Resembling coral.

The pentadactyl, columnar, *coralloid* bodies, that are composed of plates set lengthways of the body, and passing from the surface to the axis of it.—*Woodward, On Fossils*.

Coralloidal, adj. Same as Coralloid.

Now that plants and ligneous bodies may imburden under water, without apprehension of air, we have experiment in coralline, with many *coralloidal* constructions.—*Sir T. Browne*.

The *corbels* that ribbed each massive aisle,
Were a fleur-de-lis or a quatre-foilly. *Sir W. Scott, Lay of the Last Minstrel*.

Corbels are used in a great variety of situations, and are curved and moulded in various ways according to the taste of the age in which they are executed; the form of a head was very frequently given them in each of the styles from 2 down to 14th century, especially when used under the eaves of the weather-mouldings of doors and windows, and in other similar situations. Any construction which is carried by *corbels* so as to stand beyond the face of a wall is said to be *corbelled* out. A *corbel-table* [is] a row of *corbels* supporting a parapet or cornice. *Classical Architect.*

Are the most pleasing objects I can find,

Dryden.

A cordial, properly speaking, is not always what increaseth the force of the heart; far, by increasing that, the animal may be weakened, as in inflammatory diseases. Whatever increaseth the natural or animal strength, the force of moving the fluids and muscles, is a cordial: these are such substances as bring the serum of the blood into the proper condition for circulation and nutrition; as brims made of animal substances, milk, ripe fruits, and whatever is endued with a wholesome but not pungent taste. — *Arbuthnot, On the Nature and Choice of Aliments*.

Prepositions are the words which express relation considered, in the same manner, in concrete with the correlative object. — *A. Smith, On the Formation of Language*.

Corépondent, s. Joint respondent. See *Correspondent*.

Coriaceous, adj. [Lat. *coriaceus*; from *corium* = hide, skin, leather.] Resembling, or consisting of, leather.

Philips.

The chief riches of Zant consist in corinth, which the inhabitants have in great quantities. — *Broom, Notes on the Odysey*.

Corinthian, adj.

1. Licentious: (the immorality of the inhabitants of ancient Corinth being notorious).

On searching for me at the bordellos, where, it may be, he has lost himself, and rises up, without pity, the same and rheumatic old pretenses, with all her young Corinthian lady, to enquire for such an one. — *Milton, A Poem for St. Gregory*.

2. In Architecture. Epithet applied to the fourth order, which is characterized by fluted shafts and foliated capitals, more delicate in form, though less rich in detail, than the Composite. Like Doric and Ionic, it is a proper rather than a common term. Partly from the elegance of the columns, and partly from the manners of the city, the word has several secondary senses more or less akin to the preceding; e.g. *Corinthian capital*, applied to the higher orders, as forming the crowning part in the structure of society.

(For example see extract under Doric.)

Corinthian, s. In allusion to the notorious licentiousness of Corinth, 'to play the Corinthian' was an expression denoting the conduct of a profligate; and in the same sense has passed into our vulgar language. In the third decade of the present century the word, both as a substantive and an adjective, was at the height of its popularity as a slang term.

I am no proud Jack, like Falstaff; but a Corinthian, too, a bit of method. — *Shakespeare, King Henry IV. Part I. II. 4*.

To act the Corinthian is to commit fornication, according to Hesychius. — *Pottier, Antiquities of Greece, II. 12*.

Where's then the sunny heat,
Whose weak undimmed'ed soles but even now
Corival'd gentleness?

Shakespeare, Troilus and Cressida, I. 3.

Cork, s. [see last extract.] Bark so called.

a. In its natural state.

Cork [is] the bark of the *Quercus liber*, a species of oak-tree which grows abundantly in the southern provinces of France, Italy, and Spain. The bark is taken off by making coriand incisions above and below the portions to be removed; vertical incisions are then made from one of these circles to another, whereby the bark may be easily detached. It is steeped in water to soften it, in order to be flattened by pressure under heavy stones, and next dried at a fire which blackens its surface. The corks are bound up in bales and sent into the market. — *Cox, Dictionary of Arts, Manufactures, and Mines*.

b. Cut into shape as a stopper for a bottle.

Be sure, my very sure, thy cork be good;
Then future ages shall of Peggy tell,
That nymph that brew'd and bottled ale so well.

King.

Nor stop, for one bad cork, his butler's pay. *Pope*.

Used adjectively, or as the first element in a compound.

Indeed, a bloody battle was just the thing to put that brave man into a good humour, and he stumped about the lower deck on the cork-leg, which, as I have said, he even then wore, as merrily as possible. — *Hannay, Singleton's Footing, II. ch. i*.

[*Cork*. Spanish, *corcho*, from Latin, *corax*, as Spanish, *paucha*, paunch, from *pauca*. It is possible however that the word may be connected with Latin *corax*, and yet not be direct from a Latin source. The root *cor* is widely spread in the Sanscrit and Finnish class of languages in the sense of risk.

skin, shell, uniting the Latin *corium*, skin, with *corle*, bark. Finnish, *kuori*, bark, shell, crust, ocean; Lappish, *karr*, bark, shell, *karras*, bark, rough; Estonian, *koor*, rind, shell, bark, *korik*, crust. Bohemian, *kura*, *kurka*, bark, crust; Polish, *kora*, bark of a tree; *korek*, *koreczek*, cork, *koreczka*, *kory* (a stopper of bark), a cork—*Wiedgwood, Dictionary of English Etymology*.]

The cork-cutters divide the boards of cork first into narrow fillets, which they afterwards divide into short parallelograms, and then round them into the proper conical or cylindrical shape. . . . The cork-cutter's knife is a broad blade, very thin, and one-edged. . . . In the art of cork-cutting the French surpass the English, as anyone may convince himself by comparing the corks of their champagne bottles with those made in this country.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Corkcutting, s. Process, or art, of cutting corks; business of a corkcutter.

(For example, see extract under preceding entry.)

Corked, part. adj. Made, wholly or in part, of cork; provided or fitted with cork.

He that weareth a corked shoe or slipper.—*Nut-let*.

And tread on corked stilts a prisoner's pace.—*Bishop Hall, Satires*, iv, 6.

Applied to wine, as in 'This wine, sample, or bottle, is corked,' it is doubtful whether cork, in its ordinary sense, has much to do with the meaning: which is *full* in general, rather than *tainted by the cork* in particular. The *corker* suggests a connection with *chaux* = lime, the latter word having the import it bears in the well-known quotation, 'There's lime [i.e. something that impairs the taste] in the sack.'

Corkiness, s. Attribute suggested by Corky; elasticity; spring; buoyancy; resilience: (in the following extract the inverted commas belong to the original text, showing that the word is one which was new to the author).

Amh himself, at this time, wrote a singularly neat hand, having greatly improved it in the India House,

where he also learned to flourish—a facility in which he took a pride, and sometimes indulged; but his flourishes (wherefore it would be too curious to enquire) almost always shaped themselves in a visionary corkscrew never made to draw.—*Tuford* (on the preceding passage), *Works of G. Lamb*, p. 134.

Corkwing, s. Fish (*Labrus cornubicus*) akin to the Corkling.

The *Corkwing*, which has been called *Cornubius*, *Cornubicus*, and *Cornubiensis*, as though supposed originally, as its name would seem to imply, to be exclusively Cornish, is not confined to the western part of England. Mistaken by the British Zoology . . . where Pennant has given the figure and the enumeration of the fin-rays of the fish, the *Corkwing*, under the name, and with part of the description, of the Goldsinny of Jago, I have, in the former edition of this work, called the fish by mistake the Goldsinny. Specimens of the true Goldsinny of Jago having since come into my possession, I have now corrected the error made in the name.—*Turrel, British Fishes*.

Corky, adj. Consisting of, or resembling, cork.

Proceeding onwards, we again meet with the *cornbrash* on the north side of the Castle Hill, and it finally disappears before reaching Peaseholme Beck.—*Magazine of Natural History*, iii, 57, n. s., *Essays of the Cornbrash Limestone of Scarborough*.

Cornel, s. (construction often adjectival.) [Fr. *cornille*, *cornie*.] Tree so called, akin to the Dogwood. (The name applies to both the tree and the fruit; though,

as the extract from Gerard in respect to the difference of form and gender according to the meaning is philologically accurate, we may, if we choose, treat the two names as two different words; one being *cornel* from *cornus*, the other *cornel* from *cornum*. The tree, however, though common on the Continent, is not a native of Britain; neither is the fruit, except in translations from the Latin, much mentioned).

The Latins call it *cornus*... in English the *cornell* tree and the *cornella* tree, of some long cherry-tree. The fruit is named in Latin *cornum*;... in English, *cornel* berries and *cornelian* cherries.—*Gerard, Herball*, p. 1601; ed. 1633.

(*Mem. Acad. Par.*, 1732.)—*Reich, Cyclopaedia*, in voce *cornelian*. French, *cornaline*; Italian, *cornalina*. A flesh-coloured stone easy to be engraved upon. (*Cotgrave*.) From *cornu*, horn, because of the colour of the finger-nail. For the same reason it is in Greek called *ovos*, the nail. (*Diez*.) Others derive it from *cornu*, because flesh-coloured.
